BTC 8-Hour Market Report

Thu 29 Oct 2026, 07:51 Malaysia time (23:51 UTC)

BTC ~ $81,000

CoinGecko/CoinDesk/CoinGlass; 24h ~flat to +0.5%

Quick view	**Bias:** Neutral, range-bound with a mild pull lower into Friday's expiry	**Next 24h range:** $79,400 - $82,600 (DVOL ~37.6 = ~2% daily move)	**Key floor:** $80,000, then $78,000 (monthly max pain)	**Big event:** US Q3 GDP + Sept PCE at 8:30pm MYT tonight; $10.9B monthly expiry Fri 4pm MYT

1. Options - next 24 hours and upcoming expiries

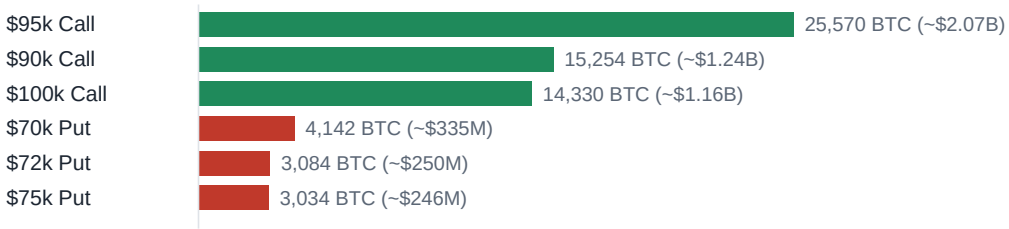
- **Next expiry:** daily BTC-29OCT26 options settle at **4:00pm MYT today (Thu 29 Oct)**. Strike-level data for this daily could not be read this run; dailies are normally a small fraction of the board and are not expected to move price on their own.
- **The one that matters:** the **Friday 30 Oct monthly** (also this week's weekly), 4:00pm MYT, about 32 hours away: ~135,000 BTC, ~**$10.92B notional**, put/call 0.53, max pain **$78,000** (Deribit data, 28 Oct).
- That is roughly a third of all Deribit BTC options open interest, so positioning around Friday's settlement is the main options force on price through the next 24-32 hours.

Expiry	Largest position seen	Size	Meaning
29 Oct daily (4pm MYT)	Not available this run	n/a	Deribit feed not readable; small daily, low impact expected
30 Oct monthly - call	$95,000 call	~25,570 BTC (~$2.07B)	Far out of the money (~17% above spot); likely to expire worthless, little hedging effect now
30 Oct monthly - call	$90,000 call	~15,254 BTC (~$1.24B)	Also far OTM; only matters on a sharp squeeze
30 Oct monthly - put	$70,000 put	~4,142 BTC (~$335M)	Deep downside insurance; far from spot
30 Oct monthly - put	$72,000 / $75,000 puts	~3,084 / ~3,034 BTC (~$250M each)	Put cluster marks the 'deep risk' zone

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Thu 29 Oct, 4:00pm (daily)	n/a	n/a	n/a	Not readable this run
Fri 30 Oct, 4:00pm (weekly + monthly)	~$10.92B	0.53	$78,000	Calls $95k, $90k, $100k; puts $70k, $72k, $75k
Fri 6 Nov, 4:00pm (weekly, post-US midterms)	n/a	n/a	n/a	Skew bucket priced put-heavy (10-delta skew -8.4 on 19 Oct)
Fri 27 Nov, 4:00pm (monthly)	n/a	n/a	n/a	Not published yet

30 Oct 2026 monthly expiry - largest open interest by strike (BTC, ~$81k spot)



How options affect the market now

- **Big walls are far away:** the large call strikes ($90k-$100k) sit 11-23% above spot and the big puts ($70k-$75k) 7-14% below, so dealers have little gamma near $81k. That favours choppy, macro-driven trade rather than options pinning.

- **Max pain pull:** max pain at $78,000 is ~3.7% below spot. Into Friday's 4pm MYT settlement there can be a mild drift lower, but it usually only matters if price is already weakening.
- **Sentiment:** put/call 0.53 means calls outnumber puts almost 2:1 - holders are positioned bullish, but most of those calls are far out of the money and will expire worthless.
- **Skew is calmer:** one-week put-call skew fell from ~10% to under 1% over the past week (CoinDesk, 28 Oct), so short-term demand for crash protection has faded; longer tenors still lean to puts.
- **After expiry:** ~a third of open interest rolls off Friday, which frees price from any pinning and often lifts realised volatility into the following week (US midterms 3 Nov, jobs 6 Nov).
- **Implied vol:** DVOL ~37.6 after the Fed (Unchained, 28 Oct) implies a ~2% (~$1,600) one-day move; the Fed hold barely moved it.

Data note: the Deribit API could not be read this run. Expiry totals are from Deribit via TokenPost/KuCoin (28 Oct). Strike OI figures are the 'largest seen' in CryptoTicker's 17 Oct snapshot (149,686 BTC then vs ~135,000 now), so sizes are likely somewhat lower today. Daily 29 Oct and 6 Nov / 27 Nov figures were not available.

2. Price action and key levels

- BTC rebounded above $81,000 on 28 Oct after dipping below $80,000 the day before; 24h range about $80,360 - $81,640 (CoinGecko).
- The Fed hold (2pm ET / 2am MYT) gave a first-hour range of $80,600 - $81,234 and BTC closed the US day near $81,000 - a muted reaction.
- Price remains below its 9-day (~$81,400) and 21-day (~$81,900) averages; the 7-day range is $79,260 - $84,810.
- The rally came without new leverage: BTC futures OI was roughly flat while price rose ~2%, and shorts made up most liquidations - a short-covering move rather than fresh buying.

Type	Level	Why it matters
Resistance 2	$84,800 - $85,000	7-day high; start of Glassnode's $85k-$87.5k supply zone
Resistance 1	$81,400 - $81,900	9-day and 21-day averages; 24h high $81,640 - repeated rejections here
Pivot	$81,000	Post-Fed settling level; current balance point
Support 1	$80,000	Round number, defended twice this week
Support 2	$78,000 - $79,000	Monthly max pain ($78k) and the 28 Oct dip low area / 7-day low $79,260
Deep risk	$75,000 - $76,000	Put cluster ($75k) and level analysts flag as bull-structure line (~$75.5k)

3. Derivatives, flows and sentiment

Metric	Latest	Read
Futures open interest	~$54.5B (CoinGlass); ~flat to -0.6% 24h	No new leverage behind the bounce
Funding rate	+0.009% to +0.010% per 8h (Binance/avg); Deribit perp 0.0058%	Neutral baseline - no crowded longs
Liquidations (24h)	~$68M BTC (82% shorts) as of 20:12 UTC 28 Oct	Short squeeze-type bounce, small in size
Spot BTC ETF flows	+$110M and +$176M last two sessions; Oct ~-$26M net	Flows turning positive again after ~$774M outflows late last week
Fear & Greed	51 (Neutral), up from 48	Neither stretched nor fearful
DVOL (30d implied vol)	~37.6	Low-ish; ~2% expected daily move
Fed odds	Dec hike ~83-86% (CME FedWatch)	Hawkish backdrop priced in

4. News and macro

- **Fed held at 3.75%-4.00%** in a 10-2 vote (Cook and Hammack wanted a 25bp hike) after September's hike. Statement: 'Inflation remains elevated.' Chair Warsh said more information is needed - December hike odds rose to ~83-86%.
- **Inflation is sticky:** September CPI was 3.7% y/y (0.6% m/m), driven by gasoline; core 2.6%. Tonight's PCE is the next test.
- **Oil and geopolitics:** WTI ~$101.70 (+1.8%) after a WSJ report that the US may renew strikes on Iran after the midterm elections - an inflation and risk-off threat.
- **ETF demand recovering:** two days of inflows totalling ~$286M have nearly erased October's net outflow.
- **Equities/earnings:** Microsoft and Alphabet reported after the US close 28 Oct; Amazon and Intel report 29 Oct. Robinhood fell ~6% pre-market on weak pricing - tech sentiment can spill into BTC.
- Galaxy's Alex Thorn says the bear market likely ended in June (BTC below $58k); Bitwise raised its long-term forecast.

Event calendar (Malaysia time)

When (MYT)	Event
Thu 29 Oct, 4:00pm	Deribit daily BTC options expiry
Thu 29 Oct, 8:30pm	US Q3 GDP (advance), Sept PCE inflation, jobless claims
Fri 30 Oct, early am	Amazon, Intel earnings (after US close 29 Oct)
Fri 30 Oct, 4:00pm	Deribit monthly BTC options expiry (~$10.9B, max pain $78k)
Sun 1 Nov	US clocks go back - US data moves to 9:30pm MYT
Tue 3 Nov - Wed 4 Nov	US midterm elections; results during Wed MYT
Fri 6 Nov, 9:30pm	US October jobs report; 4pm Deribit weekly expiry
Tue 10 Nov, 9:30pm	US October CPI
Fri 13 Nov, 9:30pm	US October PPI
Thu 19 Nov, 3:00am	FOMC minutes (27-28 Oct meeting)
Thu 10 Dec, 3:00am	Next FOMC decision (8-9 Dec meeting)

5. Summary and prediction

BTC is stuck around $81,000 after a Fed hold that was hawkish in tone but fully expected, so the market barely moved and implied volatility stayed near 37-38. The bounce off $80,000 was driven by short covering rather than new longs, funding is neutral and ETF flows have turned positive again, which keeps the floor firm. Options are not pinning price: the big call walls ($90k-$100k) and put clusters ($70k-$75k) are far away, but the $10.9B monthly expiry on Friday has max pain at $78,000, which adds a slight downward pull if tonight's GDP/PCE data disappoint. Tonight's 8:30pm MYT data is the main trigger; a hot PCE plus $100+ oil supports the December-hike story and would pressure BTC. **24h call: range $79.4k-$82.6k, mild downside tilt into Friday's expiry; a close below $80k opens $78k.**

Scenario	Chance	Range	Trigger
Base: range	50%	$80,000 - $82,000	In-line GDP/PCE; chop ahead of Friday expiry
Bearish	30%	$78,000 - $80,000	Hot PCE, oil spikes, break and hold below $80k; drift to max pain
Bullish	20%	$82,000 - $84,800	Soft PCE, strong ETF inflows, close above $81,900 (21-day average)

- **Upside signal:** hourly close above $81,900 with rising open interest and positive ETF flows - targets $83.5k-$84.8k.
- **Downside signal:** hourly close below $80,000 after the 8:30pm MYT PCE print - opens $79k then $78k max pain into Friday 4pm MYT.
- Next report: 3:50pm MYT (Thu 29 Oct), just before the 4pm daily expiry.
