BTC 8-Hour Market Report

Saturday 17 Oct 2026, 16:05 Malaysia time (08:05 UTC)

BTC ~ $81,450

CoinDesk/CoinGecko: 24h -0.7%, week -1.3%

Quick view	**Bias:** Neutral, slight bearish lean	**Next 24h range:** $80,500 - $82,800	**Key floor:** $80,000 (then $78,000)	**Big event:** $11.7B monthly expiry Fri 30 Oct; FOMC 29 Oct 02:00

1. Options - next 24 hours and upcoming expiries

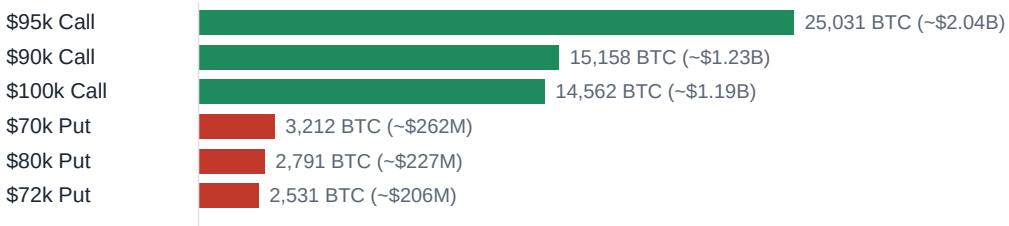
- Today's daily expiry (Sat 17 Oct, 4:00pm MYT) has just settled. The only expiry in the next 24 hours is the **Sun 18 Oct daily at 4:00pm MYT**.
- Weekend dailies are small; no published open-interest breakdown was found and the Deribit feed could not be read this run, so it is **unlikely to move price** on its own.
- The expiries that matter: the **Fri 23 Oct weekly (~$1.15B, put-heavy)** and above all the **Fri 30 Oct monthly (~$11.7B, call-heavy, max pain $78k)**.

Expiry	Largest position seen	Size	Meaning
Sun 18 Oct daily	Not available	Small (weekend)	No visible wall; spot flows dominate
Fri 23 Oct weekly	$78,000 Put (largest)	Top strike; total ~13,773 BTC	Hedge floor just below spot; $70k and $80k puts next
Fri 23 Oct weekly	Max pain $82,000	P/C 1.24	Mild pull toward $82k into Friday
Fri 30 Oct monthly	$95,000 Call	25,031 BTC (~$2.04B)	Far above spot; upside lottery, no near-term wall

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Sun 18 Oct 16:00 (daily)	n/a (small)	n/a	n/a	No published data
Fri 23 Oct 16:00 (weekly)	~$1.15B	1.24	$82,000	Puts: $78k, $70k, $80k (largest OI)
Fri 30 Oct 16:00 (monthly)	~$11.7B	0.48-0.52	$78,000	Calls $95k / $90k / $100k; puts $70k / $80k / $72k
Fri 16 Oct (just expired)	~$1.47B	1.37	$83,000	Puts $78k (2,746), $80k (2,142); call $90k (1,144)

Fri 30 Oct monthly expiry - largest open interest by strike (BTC, CryptoTicker data as of 10 Oct)



How options affect the market now

- **Short-dated tone is defensive:** the weekly and just-expired weekly both had put/call above 1.2, with the biggest positions in the $78k-$80k puts. Traders are paying for downside protection, not chasing upside.
- **$80k is a hedging floor:** dealers who sold those puts tend to buy dips toward $80k, which helps explain the bounce from the $79.7k wick. If $80k breaks cleanly, that hedging flips and selling can accelerate toward $78k.
- **Max pain pulls are mixed:** weekly max pain $82k sits just above spot (mild upward pull into Friday), while the much larger monthly max pain is $78k (downward pull into 30 Oct).
- **The monthly is call-heavy but far away:** the $90k-$100k calls (~$4.5B) are 10-23% above spot. They do not cap price now; they only matter if a squeeze toward $88k-$90k begins.

- **The next-24h expiry is too small to matter.** Weekend liquidity is thin, so stops and liquidations, not options, are the bigger short-term driver.
- **Volatility:** implied vol was ~35% around the 16 Oct expiry (Greeks.live), implying a typical daily move of ~1.8% (~$1,500). Volatility tends to build into the 28-30 Oct FOMC plus monthly-expiry window.

Data note: the Deribit API (index, DVOL and option book) could not be read this run, so options figures come from published articles (CryptoTicker, TokenPost, Greeks.live) dated 10-16 Oct and are the 'largest seen'. USD sizes = OI x ~$81,450. Monthly strike data is a week old and may have shifted.

2. Price action and key levels

- BTC is ~$81,450, down ~0.7% in 24h and ~1.3% on the week. 24h range $80,761 - $82,816.
- Thursday's wick to $79,711 was the first trade under $80k in over a month; buyers reclaimed $80k quickly and price has since chopped between $80.8k and $82.8k.
- Price is hugging the $81,600 daily level and sits just above the 50-day EMA ($80,407). The 200-day EMA is far below at ~$75,760, so the longer trend is still up.
- Momentum is soft: RSI ~49 and ADX ~25 with sellers slightly in control (Decrypt). Search interest in Bitcoin is at multi-year lows, a sign of thin retail participation.

Type	Level	Why it matters
Resistance 2	$84,250	Daily close above needed for a bullish shift; above it $85.3k-$87.4k opens
Resistance 1	$82,500 - $82,816	24h high and repeated failed highs ($83.1k on 14 Oct, $83.7k on 12 Oct); weekly max pain $82k
Pivot	$81,600	Daily level price is hugging; holding above keeps the range neutral
Support 1	$80,400 - $80,760	50-day EMA, swing low and 24h low
Support 2	$79,700 - $80,000	Round number, Thursday wick low and big weekly put hedges
Deep risk	$78,000 then $75,100 - $75,800	Largest weekly put + monthly max pain; then 200-day EMA / 50% retrace

3. Derivatives, flows and sentiment

Metric	Latest	Read
Futures open interest (all coins)	$65.6B	Leverage still elevated after the ~$1B flush on 15 Oct
Funding rate (8h)	~0.0074%	Neutral-positive; no crowded long or short
Liquidations 24h	$315M total; BTC $75.8M	66% longs; much calmer than 15 Oct (~$1B)
Spot BTC ETF flows	16 Oct: -$82.4M (SoSoValue) / +$15.9M (other source)	Sources differ; 14 Oct -$261.5M; October MTD about -$540M; weak demand
7-day ETF total	~-$135M	Second straight soft week after strong Aug/Sep inflows
Fear and Greed	40 (Fear) per CoinGlass-based report; 55 per CoinGecko-based report	Readings differ by provider; sentiment cooling either way
Implied volatility	~35% (16 Oct, Greeks.live)	Implied daily move ~1.8% (~$1,500)

4. News and macro

- **US inflation hot:** September CPI 3.7% y/y (core 2.6%), up from 3.4%; September PPI 6.3% y/y. The Fed hiked 25bp on 16 Sep to 3.75-4.00%.

- **FOMC 27-28 Oct:** markets price mostly a hold (fed funds futures >70% unchanged) but hike odds jumped as high as ~47% after PPI before easing to ~26-30%. Fed minutes showed officials see another hike coming. Chair Warsh gave no clear rate signal in his last appearance before the meeting.
- **Risk-off in equities:** QQQ -2.5% and SPY -1.1% on 16 Oct; Nasdaq -5.5% over five sessions, volatility up. Oil firm on US-Iran tensions; dollar strong.
- **Institutional:** Deutsche Bank says its BTC/ETH custody launch is "only weeks away" (institutional clients, Germany first).
- **Quantum headlines:** new research and a new industry alliance warn that ~6.4M BTC (including Satoshi-era coins) could be exposed to future quantum attacks; a narrative risk, not an immediate one.

Event calendar (Malaysia time)

When (MYT)	Event
Sun 18 Oct 16:00	Deribit daily options expiry (small)
Fri 23 Oct 16:00	Deribit weekly expiry (~$1.15B, P/C 1.24, max pain $82k)
Thu 29 Oct 02:00	FOMC rate decision (28 Oct 18:00 UTC)
Thu 29 Oct 20:30	US PCE inflation and Q3 GDP
Fri 30 Oct 16:00	Deribit monthly expiry (~$11.7B, max pain $78k)
Fri 30 Oct 20:30	US Employment Cost Index
Tue 10 Nov ~21:30	US October CPI

5. Summary and prediction

BTC is stuck in a tight $80.8k-$82.8k range after defending $80k on Thursday. Short-dated options are put-heavy around $78k-$80k, which gives dealers a reason to support dips near $80k, while sellers keep capping $82.5k-$83k. Macro is the headwind: hot CPI/PPI, rising Fed-hike talk before the 28 Oct FOMC, weak equities and soft ETF demand. With thin weekend liquidity and no meaningful expiry until Friday, the most likely path is more range trading, with a slightly higher risk of a test of $80k than a breakout above $83k. **24h call: range $80,500-$82,800, slight bearish lean; $80k is the line that matters.**

Scenario	Chance	Range	Trigger
Base: range	55%	$80,500 - $82,800	Quiet weekend, no macro shock; funding stays neutral
Bullish	20%	$82,800 - $84,300	Hourly close above $82,816 with rising volume; short squeeze toward $84.2k
Bearish	25%	$78,000 - $80,500	Break and hold below $80,000; put-hedge selling and long liquidations toward $78k

- **Upside signal:** 4h close above $82,816, then a daily close above $84,250.
- **Downside signal:** 4h close below $80,000; first target $78,000.
- Next report: 23:50 MYT (Sat 17 Oct).
