BTC 8-Hour Market Report

Friday 30 Oct 2026, 15:52 Malaysia time (07:52 UTC)

BTC ~ $77,900

CoinGlass: -4.2% 24h | 24h range $76,443-$81,840

Quick view	**Bias:** Cautious / bearish-neutral after Binance hack	**Next 24h range:** $75,500 - $80,500	**Key floor:** $76,300 (hack-day low), then $75,000	**Big event:** $11B monthly expiry at 4:00pm MYT today; Binance withdrawals due back within 48h

1. Options - next 24 hours and upcoming expiries

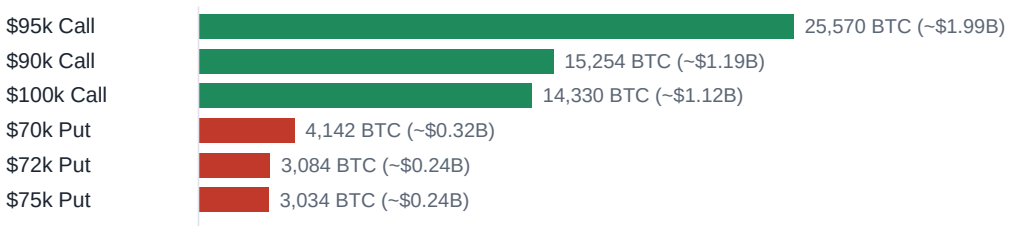
- **Right now:** the October monthly (BTC-30OCT26) settles at **4:00pm MYT today** - minutes after this report. About 135,000 BTC (~$10.9-12.2B notional), ~35% of all Deribit BTC open interest.
- **Next 24h after that:** only the small Saturday daily (BTC-31OCT26, 4:00pm MYT Sat 31 Oct). Dailies are usually a few thousand BTC at most - too small to pin price.
- **Which expiry matters next:** weekly Fri 6 Nov (same day as US jobs report) and the November monthly Fri 27 Nov; the December quarterly (25 Dec, ~135,500 BTC) is the next really big one.

Expiry	Largest position seen	Size	Meaning
30 Oct monthly (4pm MYT today)	$95,000 Call	25,570 BTC (~$1.99B)	Far OTM - expires worthless; dealer hedges tied to it unwind
30 Oct monthly (4pm MYT today)	$70,000 Put	4,142 BTC (~$0.32B)	Largest put cluster - 10% below spot, also expires worthless
31 Oct daily / 6 Nov weekly	Not readable this run	n/a	Strike-level data unavailable; treat as small vs. the monthly

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Fri 30 Oct, 4:00pm (monthly)	~$10.9-12.2B	0.52-0.56	$78,000 (range $76-79k)	Calls $95k / $90k / $100k; puts $70k / $72k / $75k
Sat 31 Oct, 4:00pm (daily)	Small (n/a)	n/a	n/a	Not readable this run
Fri 6 Nov, 4:00pm (weekly)	n/a	n/a	n/a	Not published yet
Fri 27 Nov, 4:00pm (monthly)	~26,800 BTC (17 Oct)	n/a	n/a	$95k call active in volume (27 Oct)
Fri 25 Dec, 4:00pm (quarterly)	~135,500 BTC (~$10.5B)	n/a	~$75,000 (1 Oct est.)	$72k put and $90k call led volume (27 Oct)

Oct 30 monthly - largest open interest by strike (Deribit, CryptoTicker 17 Oct snapshot; USD at $78k)



How options affect the market now

- **Max pain did its job:** price is sitting almost exactly on the $78,000 max-pain level into settlement. Pinning pressure ends at 4pm MYT today.
- **Calls are worthless:** ~86% of contracts were out of the money; the $90k-$100k call stack (~55,000 BTC) expires worthless, so no upside 'magnet' remains for now.

- **Gamma unlock:** with ~35% of open interest gone, dealer hedging that damped moves between $75k and $82k disappears. Expect larger, flow-driven swings into the weekend.
- **Put/call ~0.52-0.56:** the expiring book was call-heavy (bullish bets placed when BTC was $81-87k). The fresh December volume is led by the $72k put - traders are buying downside protection.
- **Volatility:** DVOL was ~36 before the hack (implied daily move ~1.9%, ~$1,470). Post-hack implied vol is likely higher; a 2-2.5% daily move ($1,600-$2,000) is a fair working range.
- **Roll risk:** traders rolling into November/December may add put demand if Binance news worsens, which would push dealers to sell into dips.

Data note: Deribit's public API could not be read this run, so live strike-by-strike OI, mark IV and DVOL for the 31 Oct daily and 6 Nov weekly were unavailable. Monthly figures come from published reports (CryptoTicker, Cointribune, Decrypt/Yahoo, Au79); strike sizes are the largest seen in the 17 Oct snapshot and may have shifted since.

2. Price action and key levels

- BTC fell from ~$81,800 to an intraday low of ~$76,300-76,400 after Binance confirmed a ~$6.3B security breach on 29 Oct (US time), its lowest in about six weeks.
- Price has bounced to ~$77,900-78,600 but remains below $80,000, which was lost after the split-vote Fed hold on 28 Oct.
- Spot bid-ask spreads briefly widened to ~5x normal during the crash; liquidity is thin and moves can overshoot.
- Daily RSI ~40 and MACD below signal: momentum is negative but not oversold. Lower highs since the $85-87k rejection earlier in October.

Type	Level	Why it matters
Resistance	$81,400 - $82,500	Weekly level (Rekt Capital), ETF holders' cost basis, supply zone
Resistance	$80,000 - $80,200	Round number and 9-day EMA; lost after Fed and hack
Pivot	$78,000	Monthly max pain and former support; price pinned here into expiry
Support	$76,300 - $76,500	Hack-day low and short-term holder cost basis
Support	$74,900 - $75,000	June ascending trendline / horizontal support
Deep risk	$72,000 - $73,000	200-day moving average (~$73k); daily close below $75k opens this

3. Derivatives, flows and sentiment

Metric	Latest	Read
Futures open interest	$53.45B (CoinGlass)	Still large after $1.5B of long wipe-outs; leverage not fully flushed
Funding rate	~0.005% (29 Oct, pre-hack)	Near neutral before the crash; post-hack level not verified
Liquidations (24h)	~$1.54B total; $1.30B longs; BTC ~$468M	Classic long squeeze; $628M in one hour late Thursday
Spot BTC ETF flows	+$17.1M (29 Oct); +$137M (28 Oct); +$176M (27 Oct)	Four straight inflow days but fading - watch 30 Oct print
Fear & Greed	30-37 (Fear)	Dropped from ~51 in one day
Total BTC options OI	$37.7B (27 Oct)	Will drop by ~$11B after today's settlement
DVOL (implied vol)	~36 (pre-hack)	Live value unavailable this run; likely elevated now

4. News and macro

- **Binance hack:** ~$6.3B in assets drained (Chainalysis ~$5.9-6.4B), linked by Chainalysis/TRM to North Korea's TraderTraitor. About $3B frozen (Tether $1.57B USDT, Circle $800M USDC). ~$1.4B of BTC split across 19 wallets cannot be frozen.

- **Binance response:** withdrawals paused; co-CEO Yi He says they should resume within 48 hours. SAFU fund and company reserves to cover all losses; cause traced to a compromised engineer's laptop, no private keys leaked so far.
- **Fed:** held at 3.75-4.00% on 28 Oct in a 10-2 vote, two members wanted a hike. Sept core PCE 3.1% y/y, Q3 GDP 3.4%, jobless claims 194k - hot data keeps hike risk alive.
- **Polymarket** suspended international trading after ~$2.6-3.5M was drained from user accounts on the same day - adds to security fears.
- **US midterm elections** on 3 Nov; some options traders are positioning for a post-election move (a $68M bet targets $90k).

Event calendar (Malaysia time)

When (MYT)	Event
Fri 30 Oct, 4:00pm	Deribit BTC monthly options expiry (~$11B, max pain $78k)
By ~Sat 31 Oct	Binance targets resuming withdrawals (48h guidance)
Sat 31 Oct, 4:00pm	Deribit daily expiry (small)
Sun 1 Nov	US clocks fall back - US 8:30am ET data now = 9:30pm MYT
Tue 3 Nov, 11:00pm	US JOLTS job openings (Sep)
Tue 3 Nov - Wed 4 Nov	US midterm elections; results during Wed 4 Nov MYT
Fri 6 Nov, 4:00pm / 9:30pm	BTC weekly options expiry / US October jobs report
Tue 10 Nov, 9:30pm	US October CPI
Fri 13 Nov, 9:30pm	US October PPI
Tue 17 Nov, 9:30pm	US retail sales (Oct)
Thu 19 Nov, 3:00am	FOMC minutes (27-28 Oct meeting)
Fri 27 Nov, 4:00pm	Deribit BTC November monthly expiry
Thu 10 Dec, 3:00am	Next FOMC decision (8-9 Dec meeting)

5. Summary and prediction

Bitcoin is trading around $77,900 after the largest exchange hack on record knocked it from ~$81,800 to ~$76,300 and liquidated ~$1.3B of longs. Price has been pinned near the $78,000 max-pain level into today's ~$11B monthly expiry, which settles at 4pm MYT. Once that pin is gone, about a third of options open interest disappears and price will be driven by spot flows and Binance headlines. The two swing factors are whether Binance restores withdrawals on time (relief) and whether stolen BTC is sold on the market (pressure). With Fed hike risk still live and fear elevated, the path of least resistance is sideways-to-lower unless $80,000 is reclaimed. **24h call: range $76,000-$79,500 with a downside lean; a close below $76,300 targets $75,000.**

Scenario	Chance	Range	Trigger
Base: post-expiry chop	50%	$76,000 - $79,500	Pin released, no new hack news, Binance withdrawals progress
Bearish: support breaks	30%	$73,000 - $76,000	Loss of $76,300 on volume; hacker BTC moved to exchanges; withdrawal delays
Bullish: relief rally	20%	$79,500 - $82,000	Withdrawals resume smoothly, more funds frozen, reclaim of $80,200

- **Bear signal:** hourly close below $76,300 with rising open interest (new shorts) - next stop $75,000, then the $73k 200-day average.
- **Bull signal:** reclaim and hold $80,200 (9-day EMA) with ETF inflows and Binance withdrawals live - opens $81,400-$82,500.
- Next report: 11:50pm MYT (Fri 30 Oct)
