BTC 8-Hour Market Report

Thursday 29 Oct 2026, 15:50 Malaysia time (07:50 UTC)

BTC ~ $80,000

CryptoTicker 06:20 UTC | 24h -0.9% | week -3.8%

Quick view	**Bias:** Neutral, slightly bearish into expiry	**Next 24h range:** $78,500 - $81,700	**Key floor:** $79,600 then $78,000 (max pain)	**Big event:** US GDP/PCE 8:30pm tonight; $11-12B expiry Fri 4pm

1. Options - next 24 hours and upcoming expiries

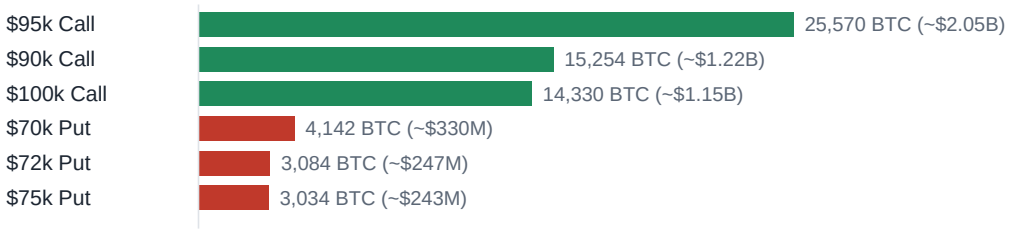
- **Next expiry:** today's daily (29OCT26) settles at 4:00pm MYT, minutes after this report - small and not market-moving.
- **The one that matters:** the October monthly (30OCT26), Fri 30 Oct 4:00pm MYT (~24 hours away). About 135,000-150,000 BTC, roughly **$10.9B-12.2B notional** - about 35% of Deribit BTC options open interest and ~10x a normal weekly.
- This week's weekly and monthly are the same expiry. After it, the next weekly is Fri 6 Nov (same day as US jobs data) and the next monthly is Fri 27 Nov.

Expiry	Largest position seen	Size	Meaning
30 Oct (monthly)	$95,000 Call	~25,570 BTC (~$2.05B)	Far out of the money (+19%); likely to expire worthless. No hedging pull now.
30 Oct (monthly)	$90,000 / $100,000 Calls	~15,250 / ~14,330 BTC	Also far OTM; call side mostly decays to zero Friday.
30 Oct (monthly)	$70,000 Put	~4,140 BTC (~$330M)	Deep downside hedge; only matters on a crash below $75k.
30 Oct (monthly)	$72k / $75k Puts	~3,080 / ~3,030 BTC	$75k-79k put cluster: hedging could accelerate a drop if $79k breaks.
6 Nov (weekly)	Not available this run	-	Strike data not found; weekly size typically ~1/10 of the monthly.

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Thu 29 Oct 4:00pm (daily)	Small	n/a	n/a	Not available
Fri 30 Oct 4:00pm (monthly)	$10.9B-12.2B	0.52-0.53	$78,000-79,000	Calls $95k, $90k, $100k; Puts $70k, $72k, $75k
Fri 6 Nov 4:00pm (weekly)	n/a	n/a	n/a	Not available this run
Fri 27 Nov 4:00pm (monthly)	~26,800 BTC (~$2.1B)*	n/a	n/a	*as of 17 Oct
Fri 25 Dec 4:00pm (quarterly)	Next major	n/a	n/a	-

30 Oct 2026 monthly expiry - largest open interest by strike (CryptoTicker/Deribit, 17 Oct snapshot)



How options affect the market now

- **Max pain pull:** max pain sits at $78k-79k, just 1-2.5% below spot. Into Friday 4pm, option sellers benefit from price drifting lower toward that zone; this often shows up as heavy, choppy trade rather than a clean trend.

- **Call wall is irrelevant this time:** the huge $90k-100k calls are 12-25% out of the money, so dealers hold little hedge against them. They expire worthless and do not cap or lift price near $80k.
- **Downside is where hedging bites:** puts cluster at $75k-80k. If $79k-79.6k breaks, dealers short those puts may sell futures to hedge, which can speed a move toward $77k-78k.
- **Put/call 0.52:** positioning is call-heavy (bullish bets), but most of those bets are failing - sentiment is fading, not panicking.
- **After expiry:** about a third of open interest disappears Friday afternoon. That removes pinning, so volatility often rises into the weekend and the October monthly close (Sat).
- **Implied move:** DVOL ~37.6 implies about +/-2.0% per day (~$1,570). Vol barely reacted to the Fed - options are not pricing a big shock.

Data note: the live Deribit API (index, DVOL, book summary) could not be reached this run, so strike sizes come from published snapshots (CryptoTicker 17 Oct; KuCoin/Phemex 28 Oct) and are 'largest seen', not live. USD sizes use ~$80k. Notional/max-pain estimates differ by tracker.

2. Price action and key levels

- BTC rose to ~$81,700 after the Fed held rates (Wed night US time), then fell back below $80,000 in Asia as tech stocks sold off; overnight low ~$79,636.
- Price has tested $80,000 repeatedly (Oct 24, 26, 27, 29) and held each time - but each bounce has been weaker.
- BTC is below its 20- and 50-day averages (50-day ~$81.3k); the 200-day is far below near ~$72.4k.
- October is set to close ~3-4% down (opened at $83,576) - the smallest October loss in years, but still red.
- Spot ETF holders' average cost (~$81.5k-81.7k) is just overhead, so rallies into that zone meet break-even selling.

Type	Level	Why it matters
Resistance 2	$83,500-84,000	October open ($83,576) and last week's high (Oct 22)
Resistance 1	$81,500-81,700	ETF cost basis + post-Fed high; repeated rejection
Pivot	$80,000	Round number tested 4 times this week
Support 1	$79,000-79,600	Overnight low and recent lows; top of put cluster
Support 2	$78,000	Options max pain; Mudrex support
Deep risk	$75,000 / $72,400	Large puts ($75k, $72k); 200-day average

3. Derivatives, flows and sentiment

Metric	Latest	Read
Liquidations (24h)	$356M total; $205M longs; BTC futures $94M	Post-Fed long flush; leverage reset
Crypto futures OI	$318.6B, -7.35%	Positions closed, not new shorts piling in
BTC funding rate	~0.0044% per 8h (-37%)	Near neutral; little froth
Spot BTC ETF flows	+$137M Oct 28 (IBIT +$136M); 3rd straight inflow day	Supportive; Oct net outflow now small
ETF total assets	~$104.9B (6.4% of BTC market cap)	Steady institutional holding
DVOL (30d implied vol)	~37.6 (Oct 28)	Near 2026 lows; ~2% daily move priced
Fear & Greed	44-51 (Neutral)	Down from ~68 a week ago

4. News and macro

- **Fed:** held rates at 3.75%-4.00% in a 10-2 vote; Cook and Hammack wanted a hike. Chair Warsh: inflation still elevated, 'wait-and-see'. Markets price ~78-90% odds of a **December hike** - a headwind for BTC.
- **Tonight 8:30pm MYT:** US Q3 GDP (advance, f/c 3.2%), September core PCE (f/c 0.3% m/m) and jobless claims. A hot PCE would firm up hike bets.
- **Tech selloff:** Alphabet -9-10% after hours on earnings; Samsung missed; KOSPI -2.6%, Nasdaq futures -1% to -1.4%. Microsoft +4.5% on Azure.
- **Oil/geopolitics:** Brent ~$115; a Houthi strike hit Saudi Arabia's Ras Tanura refinery; US-Iran tension persists - feeds inflation worries.
- **ETFs:** three straight inflow days (~$420M+ since Oct 26) cut October's net outflow to roughly $26M-200M depending on tracker.

Event calendar (Malaysia time)

When (MYT)	Event
Thu 29 Oct 8:30pm	US Q3 GDP (advance), Sept PCE / core PCE, jobless claims
Fri 30 Oct 4:00pm	Deribit October monthly options expiry (~$11-12B BTC)
Sat 31 Oct, 8:00am	October monthly candle close
Sun 1 Nov	US clocks go back: US 8:30am data = 9:30pm MYT from here
Tue 3 Nov	US midterm elections
Fri 6 Nov 9:30pm	US jobs report (NFP); weekly options expiry 4:00pm
Tue 10 Nov 9:30pm	US CPI (October)
Fri 13 Nov 9:30pm	US PPI
Tue 17 Nov 9:30pm	US retail sales
Fri 27 Nov 4:00pm	November monthly options expiry
Thu 10 Dec 3:00am	FOMC decision (Dec 8-9 meeting)

5. Summary and prediction

BTC is pinned around $80,000 after a hawkish Fed hold and a tech-stock selloff pushed it back from $81.7k. The options picture is clear: Friday's ~$11-12B monthly expiry has its max pain at $78k-79k and its giant call positions ($90k-100k) far out of reach, so there is no options support above spot and a mild magnet below it. ETF inflows and a cleaner futures market (lower funding, $356M of liquidations already flushed) limit the downside, while the ETF cost basis at ~$81.5k caps rallies. Tonight's US GDP/PCE at 8:30pm MYT is the main wildcard before expiry. **24h call: chop between $78.5k and $81.7k with a slight lean toward a $78-79k test into Friday's 4pm expiry.**

Scenario	Chance	Range	Trigger
Base: pin and chop	55%	$78,500 - $81,000	In-line PCE; price drifts toward max pain into expiry
Bullish breakout	20%	$81,700 - $83,600	Soft PCE + ETF inflows; hourly close above $81.7k
Bearish break	25%	$76,500 - $79,000	Hot PCE / more tech selling; hourly close below $79.6k, then $79k

- Hourly close above $81,700 (ETF cost basis) = clean bullish signal; target the $83.5k October open.
- Hourly close below $79,000 = bearish signal; put hedging may accelerate toward $77k-78k.
- Next report: 11:50pm MYT (after tonight's US GDP/PCE data).
