BTC 8-Hour Market Report

BTC ~ $84,000

Monday 12 Oct 2026, 15:50 Malaysia time (07:50 UTC)

Bitcoin.com/CoinGecko ~07:30 UTC | 24h +1.0-1.3% | week -3.2%

Quick view	**Bias:** Neutral, mild upside lean inside $83-85k	**Next 24h range:** $82,800 - $85,300	**Key floor:** $83,200-83,500 (20-day EMA), then $82,500	**Big event:** US CPI Wed 14 Oct, 8:30pm MYT

1. Options - next 24 hours and upcoming expiries

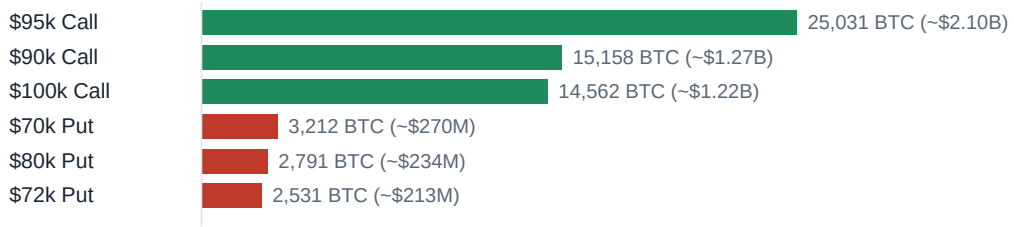
- **Next expiries:** today's Deribit daily (12 Oct) settles at 4:00pm MYT, minutes after this report; the next one is the Tuesday daily, **13 Oct 4:00pm MYT**. Daily expiries are small and rarely move price.
- **How big:** no published sizing for the 13 Oct daily was found this run (the Deribit feed could not be read). The weekly on Fri 16 Oct is only ~15,037 BTC (~$1.26B), with a bearish tilt (P/C 1.50).
- **Which expiry matters:** the 30 Oct monthly (~140,844 BTC, ~$11.7B, about a third of Deribit BTC OI) dominates positioning; this week the weekly matters mainly through its $80k put cluster.

Expiry	Largest position seen	Size	Meaning
13 Oct daily	Not available	n/a	No public data; daily expiries are usually too small to pin price.
16 Oct weekly - put	$80,000 put	2,262 BTC (~$190M)	Main hedge below price; $78-80k is the densest put zone across Oct expiries.
16 Oct weekly - total	15,037 contracts (9,025 puts / 6,012 calls)	~$1.26B	Put-heavy (P/C 1.50): traders are paying for downside protection into CPI.

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Tue 13 Oct, 4:00pm (daily)	n/a	n/a	n/a	No data found this run
Fri 16 Oct, 4:00pm (weekly)	~$1.26B	1.50	Not published	Put $80k (2,262 BTC)
Fri 30 Oct, 4:00pm (monthly)	~$11.69B	0.48	$78,000	Calls $95k (25,031), $90k (15,158), $100k (14,562); puts $70k (3,212), $80k (2,791), $72k (2,531)
Fri 25 Dec, 4:00pm (quarterly)	n/a	n/a	n/a	Not checked this run

30 Oct 2026 monthly expiry - largest open interest by strike (BTC; USD at ~$84,000)



How options affect the market now

- **Today's and Tuesday's dailies are too small to matter**; price over the next 24h will be driven by spot/perp flows and pre-CPI positioning, not expiry pinning.
- **Downside cushion at $80k:** puts at $80k (weekly and monthly) plus $78k max pain mean dealers who are short those puts buy dips toward $80k, which tends to slow a slide - but if $80k breaks, their hedging can flip to selling and speed it up.
- **Upside is open until ~$90k:** the big call walls ($90k, $95k, $100k) are far above price, so they do not cap a move to $85-88k. Approaching $90k, call hedging can add fuel (gamma squeeze) or create a wall, depending on who is short.
- **Mixed sentiment:** the near weekly is put-heavy (P/C 1.50 - fear into CPI), while the monthly is call-heavy (P/C 0.48 - longer-dated upside bets). Short-term hedged, medium-term hopeful.

- **Max pain pull:** the monthly max pain at $78,000 is ~7% below price; that pull usually only matters in the final days before 30 Oct, not this week.
- **Volatility:** last DVOL reading found was 36.3 (9 Oct), implying ~1.9% (~$1,600) daily moves. Implied vol is likely to stay firm until CPI clears, then can drop.

Data note: the Deribit public API (index, DVOL, book summary) could not be fetched this run, so strike figures are the largest seen in CryptoTicker/Dinar Detectives (10 Oct) and Crypto Briefing (8 Oct) write-ups; USD sizes computed at ~$84,000. DVOL is the 9 Oct reading, not live.

2. Price action and key levels

- BTC recovered above $84,000 overnight after Sunday's weekly close at ~$83,773; ~$140M of shorts were liquidated on the move (Bitcoin.com).
- 24h range roughly $82,880 - $84,180 (TokenPost/CoinGecko). The week of 5 Oct ran from $86,530 down to $80,393 before the rebound.
- Momentum is constructive but unconfirmed: RSI ~55, MACD still below zero (Invezz). $85,000 is the first ceiling sellers have defended.
- Liquidation maps show short clusters at $86-88k and long clusters at $80-82.5k - both are magnets if price trends.

Type	Level	Why it matters
Resistance 2	$86,000 - $88,000	Short-liquidation cluster; Oct high area ($86.5k); 30-day high $86,597
Resistance 1	$85,000	Rejected rallies all week; a daily close above opens the short squeeze zone
Pivot	$84,000	Reclaimed this morning; holding it keeps the rebound alive
Support 1	$83,200 - $83,500	Intraday support and the 20-day EMA (~$83,503)
Support 2	$82,500	Old weekly resistance turned support; top of long-liquidation zone
Deep risk	$80,000 - $78,000	Largest put hedges ($80k), monthly max pain $78k, 50-day EMA ~$80,195

3. Derivatives, flows and sentiment

Metric	Latest	Read
Perp OI (all venues)	~$66.4B (CoinGecko, 12 Oct)	Elevated; Binance BTC OI ~92,700 BTC, flat over 48h
Funding (Binance)	~0.002% per 8h	Neutral - no crowding on either side
Liquidations 24h	~$46.7M (shorts $39.6M)	Short squeeze fuelled the move above $84k
Long/short (Binance)	Accounts ~1.34; top traders ~1.55	Retail and top traders lean long
Spot ETF flows	7 Oct -$485M, 8 Oct -$244M, 9 Oct +$21M	Week of 5 Oct: -$681M, largest weekly outflow since June; selling easing
Implied vol (DVOL)	36.3 (9 Oct, last seen)	~1.9% implied daily move
Fear & Greed	69 (Greed), up from 61-64	Sentiment recovered fast; vulnerable to a CPI surprise

4. News and macro

- **Macro hawkish backdrop:** the Fed hiked in September and the minutes show most officials see another hike by year-end; 10-year yields above 5% and the dollar near an 18-month high are headwinds for BTC.
- **US CPI on Wed 14 Oct (8:30pm MYT)** is the week's key event; then PPI and retail sales on Thu. Fed Chair Warsh speaks at the IMF meetings on Fri 16 Oct.
- **Geopolitics/oil:** Brent above $100-103 on Middle East tension (Houthi attacks on Saudi airports; Iran calls the US response insufficient). Trump announced an 'energy ceasefire' for Russia-Ukraine, not accepted by Russia.

- **Security:** Ledger supply-chain attack via Malaysian reseller CryptoBilis - reported losses above $86M (unverified by Ledger). Do not set up unused Ledger devices bought from that reseller.
- **Regulation/industry:** CFTC proposed rules classing prediction markets as derivatives; Hong Kong lists a second Solana spot ETF on 13 Oct; Hyperliquid is tightening position caps.
- US Columbus Day holiday today (bond market closed) - thinner US-hours liquidity.

Event calendar (Malaysia time)

When (MYT)	Event
Mon 12 Oct, 4:00pm	Deribit daily expiry (12 Oct); IMF-World Bank meetings in Bangkok (to 18 Oct)
Tue 13 Oct, 4:00pm	Deribit daily expiry; Fed Governor Waller speaks (time TBC); JPM, Goldman earnings
Wed 14 Oct, 8:30pm	US September CPI (headline ~3.7%, core ~2.5% expected per CryptoTicker)
Thu 15 Oct, 8:30pm	US September PPI, retail sales, jobless claims
Fri 16 Oct, 2:00am	Fed Beige Book
Fri 16 Oct, 4:00pm	Deribit weekly expiry (~$1.26B); Fed Chair Warsh at IMF (time TBC)
Fri 23 Oct, 4:00pm	Deribit weekly expiry
Thu 29 Oct, 2:00am	FOMC decision (meeting 27-28 Oct); another hike is on the table
Fri 30 Oct, 4:00pm	Deribit monthly expiry (~$11.7B, max pain $78k)

5. Summary and prediction

BTC has bounced back above $84,000 on a short squeeze and easing ETF outflows, but the rebound has not been confirmed: $85,000 keeps capping rallies, ETF demand was weak last week, and the macro backdrop (Fed hiking, 5%+ yields, oil above $100) is hawkish. Options positioning is not a major force over the next 24 hours - the dailies are small - but puts at $80k and a $78k monthly max pain define the downside zone, while call walls sit far above at $90-100k. With CPI two days away, the most likely path is range trading between the 20-day EMA and $85k. **24h call: range $82,800-85,300, mild upside lean; a daily close above $85k is the bullish trigger, a loss of $83,200 the bearish one.**

Scenario	Chance	Range	Trigger
Base: range	55%	$82,800 - $85,300	Pre-CPI chop; $85k sellers and $83.2-83.5k buyers both hold
Bullish: squeeze	25%	$85,300 - $87,500	Hourly/daily close above $85k pulls in the $86-88k short liquidations
Bearish: fade	20%	$80,800 - $82,800	Loss of $83,200 and $82,500, e.g. on hawkish Fed talk, oil spike or renewed ETF outflows

- **Breakout signal:** a 4h close above $85,000 with rising OI and funding still near neutral.
- **Breakdown signal:** a 4h close below $83,200 (20-day EMA), then $82,500 - opens the path toward the $80k put zone.
- Next report: 11:50pm MYT, Mon 12 Oct
