BTC 8-Hour Market Report

Tuesday 13 Oct 2026, 07:50 Malaysia time (23:50 UTC, 12 Oct)

BTC ~ $82,000

CoinDesk ticker; 24h about -1% to -2%; 7d -3.5%

Quick view	**Bias:** Neutral to slightly bearish into CPI	**Next 24h range:** $80,800 - $84,000	**Key floor:** $81,300 then $80,000 put wall	**Big event:** US CPI Wed 14 Oct, 8:30pm MYT

1. Options - next 24 hours and upcoming expiries

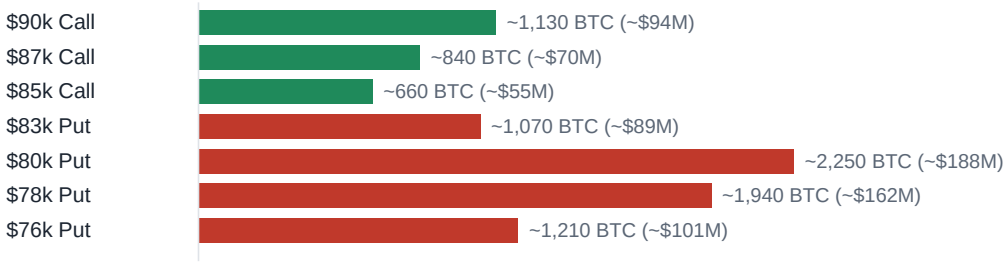
- **Next expiry:** Deribit daily, **today Tue 13 Oct, 4:00pm MYT** (08:00 UTC). Daily books are normally small; strike detail could not be read this run.
- **Weekly Fri 16 Oct, 4:00pm MYT:** about 15,500 BTC (~$1.29B), put-heavy (P/C 1.43), max pain $83,000. It settles after CPI (Wed) and PPI (Thu), so it is the one that matters this week.
- **Monthly Fri 30 Oct, 4:00pm MYT:** the real giant, ~$11.7B notional, call-heavy (P/C 0.48), max pain $78,000, huge $95k call stack. Settles the day after the FOMC decision.

Expiry	Largest position seen	Size	Meaning
13 Oct daily (4pm)	Not readable this run	n/a	Too small to drive price on its own; dealer flows from weekly and monthly matter more.
16 Oct weekly	$80,000 Put	~$188M (~2,250 BTC)	Main floor for the week; dealers short these puts buy dips near $80k, but a clean break can speed selling.
16 Oct weekly	$90,000 Call	~$94M (~1,130 BTC)	Upside target only if CPI is soft; $85k and $87k calls are the first speed bumps.
30 Oct monthly	$95,000 Call	25,031 BTC (~$2.05B)	Far above price; mostly a lottery ticket. Only matters if BTC rallies hard into late October.

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Tue 13 Oct, 4:00pm (daily)	n/a	n/a	n/a	Not readable this run
Fri 16 Oct, 4:00pm (weekly)	~$1.29B	1.43	$83,000	Puts $80k ($188M), $78k ($162M), $76k ($101M); calls $90k ($94M), $87k ($70M), $85k ($55M)
Fri 30 Oct, 4:00pm (monthly)	~$11.69B	0.48	$78,000	Call $95k (25,031 BTC); puts $70k (3,212 BTC), $80k (2,791 BTC)

Fri 16 Oct weekly - largest strikes (USD notional; BTC = USD / $83,450 snapshot)



How options affect the market now

- **Pin toward $83k into Friday:** weekly max pain sits at $83,000, just above spot. With 7-day IV low (~32%), dealers who are long options tend to sell rallies and buy dips, which keeps price in a range until CPI.
- **$80k is the floor that matters:** $76k-$80k holds ~$451M of weekly puts plus the monthly $80k block. Above it, hedging supports dips; below it, dealers who sold those puts must sell futures, which can accelerate a drop toward $78k.
- **Put/call 1.43 on the weekly = defensive, not panic:** traders are hedging long spot (10x Research), skew turned to puts (-2.4), but options remain cheap, near five-year lows.
- **Cheap vol + CPI = breakout risk:** low IV before a macro print often precedes a bigger move than priced. Expect IV and the move to jump around 8:30pm MYT Wed.

- **Monthly is call-heavy:** $4.5B of calls at $90k-$100k for 30 Oct. A soft CPI could trigger a chase toward $85k-$87k; otherwise these decay and the $78k max pain pulls later in the month.
- **Today's 4pm daily expiry:** likely too small to move price; watch for a small pin and slightly freer moves after 4pm MYT.

Data note: the Deribit public API and DVOL feed could not be read this run (access not granted), so strike data comes from published Deribit snapshots: CryptoSlate/Laevitas (12 Oct, weekly) and CryptoTicker (10 Oct, monthly). Treat sizes as 'largest seen'. IV uses 7-day ATM IV (~32-33.5%) in place of DVOL; implied daily move = 33/sqrt(365) ~ 1.7% (~$1,400).

2. Price action and key levels

- BTC slipped from a Sunday high just above $84,000 to about $82,000-82,900 on Monday as the US dollar index hit an 18-month high above 102.5 and yields rose.
- Local low near $80,300-80,400 held last week; the rebound stalled below the $84,000-86,500 cost-basis cluster (about 1.45M BTC held at a small loss, per Bitfinex).
- Altcoins outperformed on thin volume (CoinDesk 80 +3% vs CoinDesk 5 +1.2%) - a sign of rotation, not fresh BTC demand.
- Coinbase premium has been negative for 19 straight days (-0.12%), showing weak US spot buying.

Type	Level	Why it matters
Resistance 2	$86,000-86,500	Top of 1.45M BTC cost-basis band; sellers to break even; $87k call strike.
Resistance 1	$84,000	Sunday high, short-term ceiling; reclaim opens $85k-86k.
Pivot	$83,000	Weekly max pain and $83k put strike; options pin zone.
Support 1	$81,300-82,000	Bitfinex retest level; Monday intraday floor.
Support 2	$80,000-80,400	Local low and the largest put wall ($188M weekly + monthly).
Deep risk	$76,000-78,000	Weekly put strikes, monthly max pain $78k; a break of $80k can slide here fast.

3. Derivatives, flows and sentiment

Metric	Latest	Read
Perp open interest (BTC)	~$29.3B, -1.9% w/w	Leverage trimmed; no big build-up of new longs.
Total crypto futures OI	$145.8B, +2.4% 24h	Turnover up but few new positions.
Funding (BTC, annualised)	~5.6-7.1%	Down from ~27%; neutral, longs not crowded.
Liquidations (24h, 12 Oct)	$304M all crypto; BTC longs $42M / shorts $21M	Longs still paying; earlier day saw $556M, mostly longs.
Spot BTC ETF flows	7 Oct -$485M; 8 Oct -$244M; 9 Oct +$21M; 12 Oct $0 (prelim)	Week to 9 Oct -$679M, worst since June. Demand is the weak spot.
Implied vol	7d ATM ~32%; 30d ~34.7%	Near five-year lows; options cheap before CPI.
Fear and Greed	42 (Fear)	Cooling; not capitulation.

4. News and macro

- **US CPI (Sep) Wed 14 Oct, 8:30pm MYT** - last inflation print before the 27-28 Oct FOMC. Markets price ~18-19% chance of an October hike and ~85% for December; a hot print would revive October hike odds.
- **Dollar and yields up:** DXY at an 18-month high above 102.5 and Brent near $103 keep pressure on risk assets.
- **ETF outflows:** spot BTC ETFs lost ~$681M last week, the largest weekly outflow since June; ETH ETFs have had no inflow day since 28 Sep.
- **Security:** Ledger reports a hardware implant in devices sold by reseller CryptoBilis; up to $93M traced, $10M frozen.

- **Regulation/adoption:** a global financial watchdog urged cross-border stablecoin crisis planning; South Korea saw its first bank loans backed by bitcoin.

Event calendar (Malaysia time)

When (MYT)	Event
Tue 13 Oct, 4:00pm	Deribit daily options expiry
Wed 14 Oct, 8:30pm	US CPI (September)
Thu 15 Oct, 8:30pm	US PPI and retail sales (September); weekly jobless claims
Fri 16 Oct, 4:00pm	Deribit weekly expiry (~$1.29B, max pain $83k)
Fri 23 Oct, 4:00pm	Deribit weekly expiry
Thu 29 Oct, 2:00am	FOMC rate decision (27-28 Oct meeting)
Thu 29 Oct, 8:30pm	US Q3 GDP (advance) and PCE inflation
Fri 30 Oct, 4:00pm	Deribit monthly expiry (~$11.7B, max pain $78k)

5. Summary and prediction

BTC is drifting at ~$82,000 under a strong dollar and steady ETF outflows, with leverage already flushed (funding near 6%, OI flat) and options pricing a quiet week. Weekly positioning is put-heavy with max pain at $83k, so the likely path before CPI is a range around $81k-$84k, with $80k as the key options floor. The real risk is that cheap volatility underprices the CPI move on Wednesday night. **24h call: range-bound $80,800-$84,000, slight downside lean; a break of $80k is the signal to get defensive.**

Scenario	Chance	Range	Trigger
Base: pre-CPI range	55%	$80,800 - $84,000	Low IV, pin toward $83k max pain, quiet ETF flows.
Bullish	20%	$84,000 - $86,500	Hourly close above $84k with ETF inflows and positive Coinbase premium.
Bearish	25%	$78,500 - $81,000	Loss of $81.3k then $80k; another big ETF outflow or yields/DXY spike.

- **Breakout up:** hourly close above $84,000 with rising spot volume - next stop $85k-86.5k.
- **Breakdown:** hourly close below $80,000 - put hedging can push toward $78k quickly.
- Next report: 3:50pm MYT (Tue 13 Oct)
