Saturday 31 Oct 2026, 00:30 Malaysia time (16:30 UTC Fri 30 Oct)

CoinGlass: $77,575, -3.1% 24h; ~-2.7% vs 27 Oct

Quick view	**Bias:** Neutral-to-bearish (hack overhang)	**Next 24h range:** $76,000 - $79,500	**Key floor:** $76,300-76,500 (hack low, 200d EMA)	**Big event:** Binance withdrawals restart (promised within 48h of Fri 1pm MYT)

1. Options - next 24 hours and upcoming expiries

- **Next expiry:** Deribit daily, **Sat 31 Oct, 4:00pm MYT** (08:00 UTC). Small: the only sizeable flow seen is ~500 BTC of $78k puts bought on hack night (~$39M).
- **The big one is done:** the Oct monthly ($10.92B, ~135k BTC, P/C 0.53) settled Fri 4pm MYT at **$78,119**, almost exactly on its $78,000 max pain. Deribit BTC options OI dropped to 285,073 BTC (~$22.1B).
- **This week matters:** weekly **Fri 6 Nov 4pm MYT** ($1.29B, max pain $80k) and the Nov 13 expiry where ~2,000 BTC of $74k puts were bought. Monthly is Fri 27 Nov ($3.55B, max pain $80k).

Expiry	Largest position seen	Size	Meaning
Sat 31 Oct 4pm (daily)	$78k Put (hack-night blocks)	500 BTC (~$39M)	Small. Puts are near the money, so mild pin/hedging around $78k into 4pm; not big enough to drive price.
Sat 31 Oct 4pm (daily)	Calls: no notable size seen	n/a	Traders were selling $80k calls, not buying; no call wall in the daily.
Fri 6 Nov (weekly)	$90k / $95k Calls	Size not published	Upside lottery tickets, far out of the money; little hedging effect now.
Fri 6 Nov (weekly)	$74k / $76k Puts	Size not published	Heaviest puts sit just under spot - the zone where dealer hedging can speed up a drop.

How options affect the market now

- **Pin is broken, magnet sits above:** the monthly pinned at $78k as expected. Now the Nov 6 and Nov 27 max pain is $80k, about 3% above spot - a mild upward pull later in the week if panic fades.
- **Put wall = trap door at $74k-76k:** big put buying on hack night (~$590M of blocks via Paradigm, 1.63 puts per call) means dealers are short puts there. If price drops into $76k-74k they sell futures to hedge, which can speed the fall.

- **Calls capped near $80k:** traders were selling $80k calls (dealers long them). Dealer hedging near $80k tends to dampen rallies, so $80k-81k is a harder ceiling.
- **Fear priced in, not extreme:** DVOL went 37.0 to 42.0 and back to 38.7 (implied daily move ~2.0%, about +/-$1,570). 1-week skew peaked ~18% in Asia hours then faded, but puts still trade richer than calls.
- **Next-24h expiry is too small to matter;** the drivers today are Binance news and the monthly candle close (Sun 8am MYT), not options.
- **Post-expiry:** with $10.9B gone, hedging that held price at $78k is released - expect freer moves until the Nov 6 positions build.

Data note: Deribit API and strike-by-strike book could not be fetched this run, so sizes are "largest seen" from published reports (CoinDesk, Tokenist, BigGo, TokenPost/Coinglass). P/C and sizes for Nov 6 were not published; n/a means not found, not zero.

2. Price action and key levels

- **Standard Chartered** (Kendrick): "negative price action still has some way to go"; base likely only after assets unfreeze. Polymarket paused international trading after a $2.6M account drain.
- **Fed (28 Oct):** held at 3.75-4.00%, 10-2 vote with two dissents for a **hike**; Chair Warsh: "our responsibility to get inflation down." Hawkish tone weighs on risk. Next FOMC 8-9 Dec.

5. Summary and prediction

The Binance hack set the tone: a long-flush of ~$1.5B took BTC to $76.3k, the monthly options pinned to $78k and expired, and traders loaded puts at $74k-78k. Funding is neutral and fear is high (30), which limits further forced selling, but retail is still long-leaning and the put cluster below $76k is a trap door if the floor gives way. The single biggest swing factor in the next 24 hours is whether Binance reopens withdrawals smoothly; the monthly close Sunday 8am MYT adds noise. **24h call: range $76,000-79,500 with a slight downside tilt; a close under $76,300 opens $74,000-75,000.**

Scenario	Chance	Range	Trigger
Base: choppy range	55%	$76,300 - $79,500	No new hack news; price oscillates around $78k pivot into the monthly close
Bullish: relief bounce	20%	$79,000 - $81,500	Binance withdrawals reopen early and cleanly, more funds frozen; 4h close above $79,000
Bearish: second leg	25%	$73,500 - $76,300	Withdrawal delay or larger loss estimate; 4h close below $76,300 triggers put-hedge selling

- **Breakout up:** hourly/4h close above $79,000 with spot volume, then $80,600 (50d EMA) - would target the $80k max pain magnet.
- **Breakdown:** 4h close below $76,300 (hack low / 200d EMA) - watch $75,000 then $74,000 put wall; DVOL above 42 would confirm stress.
- Next report: Sat 31 Oct, 7:50am MYT
