# BTC 8-Hour Market Report

Saturday 31 Oct 2026, 07:51 Malaysia time (23:51 UTC, 30 Oct)

**BTC ~ $76,800**

CoinGecko $76,765 | 24h -2.5% | 7d -5.7%

| | | | | |
|---|---|---|---|---|
| **Quick view** | **Bias:** Bearish-neutral (post-hack, puts in demand) | **Next 24h range:** $75,800 - $78,600 | **Key floor:** $76,300-76,500 (Fri low + 200-day EMA) | **Big event:** Binance withdrawal restart targeted ~Sun 1 Nov; Oct monthly close 08:00 MYT Sun |

## 1. Options - next 24 hours and upcoming expiries

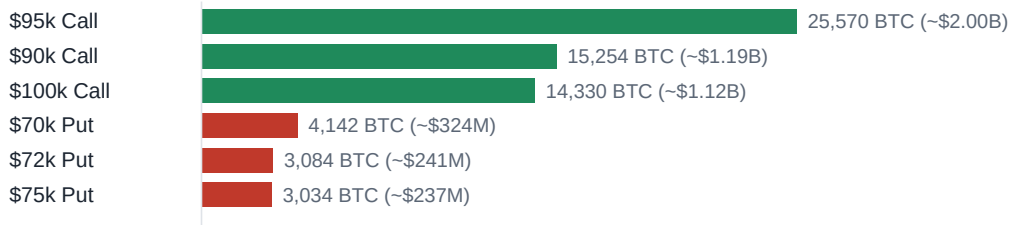
- **Next expiry:** Deribit daily, **Sat 31 Oct 4:00pm MYT** (08:00 UTC). Daily books are small; the only sizable position seen is a $78k put block bought during the hack sell-off.
- **How big:** The giant Oct monthly ($10.92B) already settled Fri at **$78,119**, almost exactly on its $78k max pain. Total Deribit BTC options OI dropped to ~285,073 BTC (~$22.1B) after the roll-off.
- **Which expiry matters this week:** Fri 6 Nov weekly (~$1.29B, max pain $80k) - modest. The bigger magnets are Fri 27 Nov monthly ($3.55B, max pain $80k) and the 25 Dec quarterly ($10.54B, max pain $75k).

| Expiry | Largest position seen | Size | Meaning |
|---|---|---|---|
| 31 Oct 16:00 (daily) | $78,000 Put | ~250 BTC block (~$19M), bought 29 Oct | Slightly in the money at $76.8k; weak pin toward $78k into 4pm, too small to drive price |
| 31 Oct 16:00 (daily) | Largest call | Not readable this run | Daily call interest not visible; assume negligible |
| 6 Nov 16:00 (weekly) | $90k / $95k Calls | Strike sizes not published ($1.29B total) | Far above spot - no overhead wall this week; lottery tickets |
| 6 Nov 16:00 (weekly) | $74k / $76k Puts | Strike sizes not published | Hedge cluster just under spot - dealers short these puts would sell into a drop below $76k |
| 27 Nov 16:00 (monthly) | $90k Call / $75k Put | 4,293 BTC (~$330M) / 2,447 BTC (~$188M) | Monthly P/C 0.66; $75k is the main downside hedge level |

### Upcoming expiries

| Expiry (Malaysia time) | Notional | Put/Call | Max pain | Largest strikes |
|---|---|---|---|---|
| Fri 30 Oct 16:00 (monthly, SETTLED) | $10.92B | 0.53 | $78,000 (settled $78,119) | Calls $95k 25,570 / $90k 15,254 / $100k 14,330; Puts $70k 4,142 |
| Sat 31 Oct 16:00 (daily) | Small | n/a | n/a | $78k put block (~250 BTC) |
| Fri 6 Nov 16:00 (weekly) | ~$1.29B | n/a | $80,000 | Calls $90k, $95k; Puts $74k, $76k |
| Fri 13 Nov 16:00 (weekly) | n/a | Put-heavy volume | n/a | $74k put = top-volume BTC option on 30 Oct |
| Fri 27 Nov 16:00 (monthly) | ~$3.55B | 0.66 | $80,000 | Call $90k (4,293 BTC); Put $75k (2,447 BTC) |
| Fri 25 Dec 16:00 (quarterly) | ~$10.54B | n/a | $75,000 | Not published |

**Open interest that just rolled off: Oct 30 monthly by strike (BTC, $ at $78,119 settle)**



### How options affect the market now

- **Pin is gone:** The $78k max-pain magnet worked into Friday's settle ($78,119). With that expiry off the board, there is no large strike near spot pinning price this weekend - moves can run more freely.
- **Call overhang cleared:** ~55,000 BTC of far-OTM calls ($90k-$100k) expired worthless. That removes stale bullish exposure; new positioning is being built mostly in puts.
- **Put demand = fear skew:** Traders bought ~1.63 puts per call in the 24h after the hack; 25-delta skew rose on all tenors; ~$590M of block trades skewed to $74k-$78k puts. Dealers short those puts hedge by selling as price falls, so a break of $76k could **accelerate** toward $74-75k.
- **Upside magnet is weak but real:** Nov 6 and Nov 27 max pain both sit at $80k. If the Binance situation calms, that level acts as a slow pull higher into late November, not over the next 24h.
- **Volatility:** DVOL went 37 -> 42 (hack) -> ~38.7. That implies a ~2.0% daily move (~$1,550). Post-expiry vol often drifts lower on weekends unless a new headline hits.
- **Next-24h expiry is too small to matter;** headlines (Binance, stolen-coin movements) will dominate the tape.

Data note: the Deribit public API (index, DVOL, book summary) could not be read this run, so strike-level sizes come from published reports (CryptoTicker, Tokenist, BigGo/CoinDesk, 30 Oct). DVOL is the last published value (~38.7 on 30 Oct). Weekly per-strike sizes were not published; treat the tables as 'largest seen'.

## 2. Price action and key levels

- Binance disclosed a ~$6.3B hot-wallet hack on Thu 29 Oct (~04:00 MYT Fri). BTC fell from ~$80,850 to $78,297 within minutes, then to an intraday low near **$76,300** on Friday - the lowest since mid-September.
- Bounces failed twice: a rally toward ~$79,000 was rejected and a second push stalled below $78,000. BTC has spent the last ~16 hours chopping between $76,300 and $77,700.
- Latest: ~$76,765 (CoinGecko), 24h range $76,338 - $79,126; OKX showed $77,313 at 00:54 MYT. Price is sitting just above the 200-day EMA (~$76,470) and below Glassnode's true market mean (~$77,600).
- October is on track to close down >7% (monthly candle closes 08:00 MYT Sun 1 Nov); BTC is ~39% below its $126,080 all-time high.

| Type | Level | Why it matters |
|---|---|---|
| Resistance 2 | $80,000 - $80,600 | Round number, 50-day EMA (~$80,593), Nov 6 and Nov 27 max pain |
| Resistance 1 | $79,100 | Failed rally high; a daily close above it would confirm the bounce |
| Pivot | $77,600 - $78,100 | True market mean (~$77.6k) + Fri expiry settle $78,119 / $78k put block |
| Support 1 | $76,300 - $76,500 | Friday low (5-week low) + 200-day EMA (~$76,470) |
| Support 2 | $75,000 - $75,450 | Strategy avg cost ~$75,446, $75k Nov put OI, Dec max pain $75k |
| Deep risk | $73,000 - $74,000 | 200-day SMA (~$73,100), heavy $74k put buying (Nov 13); dealer hedging could accelerate here |

## 3. Derivatives, flows and sentiment

| Metric | Latest | Read |
|---|---|---|
| Futures OI (all crypto) | $136.3B, -3% (30 Oct) | Leverage flushed; BTC OI only -1.4% vs -3.1% price - some new shorts/dip buyers entered |
| BTC funding | Positive, ~0.002-0.005% / 8h | Longs still paying - not a capitulation reading; room for another flush |
| Liquidations 24h | ~$1.5-1.66B total; BTC ~$500-556M | 83-87% longs - the long-side washout is done for now |
| Spot BTC ETF flows | +$17.1M on 29 Oct (4th day in a row; ~$441M over 4 days) | All pre-hack. 30 Oct flows not yet published - first post-hack read |

| Metric | Latest | Read |
|---|---|---|
| Fear & Greed | 29-30 (Fear), from ~50 a day earlier | Sharp sentiment drop; contrarian-supportive if price holds $76k |
| DVOL / implied move | ~38.7 (peak 42); ~2.0% / ~$1,550 per day | Elevated but not panic; skew to puts |
| Deribit options OI | ~285,073 BTC (~$22.1B) after expiry | Smaller book after the monthly roll-off |

## 4. News and macro

- **Binance hack (~$6.3B):** largest crypto theft on record; ~17,985 BTC (~$1.4B) among stolen assets across 10 chains. Analytics firms link it to North Korea's TraderTraitor group. Binance says ~$3B is frozen, it has set aside ~$6.34B to cover all losses, and withdrawals are suspended for ~48h with a restart targeted around Sun 1 Nov.
- **Risk-off across markets Fri:** Nasdaq about -2.1%, S&P about -1.3%, VIX ~23, oil ~$105; tech sell-off added pressure on BTC.
- **Fed:** held rates at the 28 Oct meeting with a 10-2 split; hot Sept PCE (3.6% y/y, core 3.1%) and strong Q3 GDP (3.4%) keep a December **hike** under discussion. 10-year yield ~4.93%.
- **Strategy (MSTR):** holds ~848,517 BTC at ~$75,446 average cost - the market watches that level as psychological support.
- **Watch:** stolen BTC moving to mixers/exchanges would be a fresh supply overhang; a clean Binance withdrawal restart would remove a major tail risk.

**Event calendar (Malaysia time)**

| When (MYT) | Event |
|---|---|
| Sat 31 Oct 16:00 | Deribit daily options expiry (small) |
| Sun 1 Nov 08:00 | October monthly candle close; Binance withdrawal restart targeted ~Sun; US clocks change (ET = UTC-5) |
| Mon 2 Nov 23:00 | US ISM Manufacturing PMI |
| Tue 3 Nov (US day) | US midterm elections - results flow into Wed 4 Nov MYT |
| Wed 4 Nov | Circle (CRCL) Q3 results |
| Fri 6 Nov 16:00 | Deribit weekly expiry (~$1.29B, max pain $80k) |
| Fri 6 Nov 21:30 | US October jobs report (scheduled) |
| Wed 11 Nov | MSCI decision on digital-asset treasury companies |
| Fri 13 Nov 16:00 | Deribit weekly expiry (heavy $74k put volume) |
| Mid-Nov 21:30 (TBC) | US October CPI |
| Wed 25 Nov | US PCE (October) |
| Fri 27 Nov 16:00 | Deribit monthly expiry (~$3.55B, P/C 0.66, max pain $80k) |
| Thu 10 Dec 03:00 | FOMC decision (9 Dec US); hike under discussion |

## 5. Summary and prediction

The Binance hack turned a range market into a defensive one: leverage was flushed ($1.5B+ liquidations, mostly longs), sentiment dropped to Fear, and options traders are paying up for $74k-$78k puts. The Oct monthly expiry pinned at $78k and is gone, so there is no big strike holding price this weekend, while the next real options magnets ($80k for Nov) are above spot and slow-acting. BTC is resting on the $76.3-76.5k shelf (Friday low + 200-day EMA). Weekend liquidity is thin, so the Binance withdrawal restart and any movement of stolen coins are the main swing factors. **24h call: range-bound with a downside tilt, $75,800-$78,600; a clean hourly close below $76,300 opens $74-75k.**

| Scenario | Chance | Range | Trigger |
|---|---|---|---|
| Base: weekend chop | 55% | $75,800 - $78,600 | No new hack headlines; Binance restart stays on track; low weekend volume |
| Bullish: relief bounce | 20% | $78,600 - $80,500 | Confirmed Binance withdrawal restart / more funds frozen; reclaim and hold $79,100 with short covering |
| Bearish: support breaks | 25% | $73,500 - $76,300 | Hourly close below $76,300, restart delay, or stolen BTC hitting exchanges; put-hedging flows accelerate toward $74-75k |

- **Break signals:** Bull = hourly close above $79,100 with rising spot volume and funding flat. Bear = hourly close below $76,300, then $75,000 (Strategy cost basis) in play.
- **Binance and stolen-coin tracker:** withdrawal restart timing (~Sun 1 Nov) and any on-chain movement of the ~17,985 stolen BTC.
- Next report: 3:50pm MYT Sat 31 Oct
