BTC 8-Hour Market Report

Thursday 29 Oct 2026, 23:55 Malaysia time (15:55 UTC)

BTC ~ $81,200

Bitstamp via Cointelegraph 23:40 MYT; 24h ~flat, Oct -3.3%

Quick view	**Bias:** Neutral, slight upside tilt	**Next 24h:** $79,500 - $82,500	**Key floor:** $79,250 - $79,600 (Oct 24 / today's low)	**Big event:** ~$10.9B monthly BTC options expiry, Fri 30 Oct 4:00pm MYT

1. Options - next 24 hours and upcoming expiries

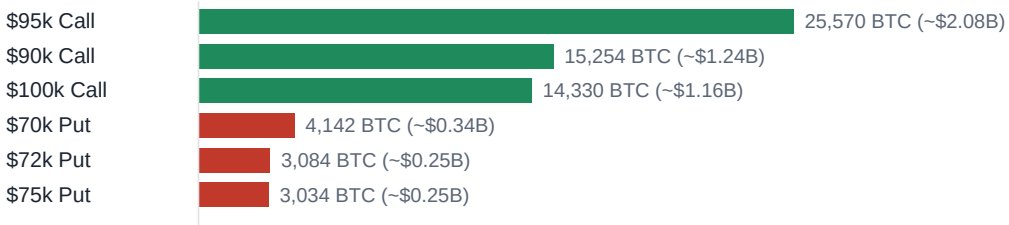
- **Next expiry: Fri 30 Oct, 4:00pm MYT (08:00 UTC)**, about 16 hours away. It is both the daily and the **October monthly** expiry (last Friday of the month).
- **It is big:** about 135,000 BTC of options, ~$10.9B notional (estimates $10.7B-$12.2B), roughly one-third of all Deribit BTC open interest. Put/call 0.53, max pain $78,000.
- After that, the next weekly is **Fri 6 Nov** (same day as the US jobs report) and the November monthly is **Fri 27 Nov**. Tomorrow's expiry is the one that matters this week.

Expiry	Largest position seen	Size	Meaning
30 Oct (monthly)	$95k Call	25,570 BTC (~$2.08B)	Far out of the money; expires worthless unless a +17% move. Top call wall.
30 Oct (monthly)	$90k Call	15,254 BTC (~$1.24B)	Second call wall; out of reach in 16h.
30 Oct (monthly)	$70k Put	4,142 BTC (~$0.34B)	Largest put; crash protection only, far below spot.
30 Oct (monthly)	$75k Put	3,034 BTC (~$0.25B)	Nearest large put; sits under the $76-78k support zone.
6 Nov (weekly)	Strike detail not found	n/a	IV 38.1%, straddle prices ~+/-4.8% ($77.1k - $84.9k).

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Fri 30 Oct, 4:00pm (monthly)	~$10.9B	0.53	$78,000	Calls $95k / $90k / $100k; puts $70k / $72k / $75k
Fri 6 Nov, 4:00pm (weekly)	not published	n/a	n/a	IV 38.1%; implied range ~$77.1k-$84.9k
Fri 27 Nov, 4:00pm (monthly)	not published	n/a	n/a	IV 35.7%

30 Oct monthly expiry - largest open interest by strike (Deribit, BTC; USD at ~$81.2k)



How options affect the market now

- **Calls dominate but are far away.** The $90k-$100k walls (~55,000 BTC) are 11-23% above spot, so they will expire worthless. They do not cap price today; they are leftover upside bets from earlier in the month.
- **Max pain pull is mild.** Max pain ($78,000) is ~4% below spot. Pinning tends to work only when price is already close, so expect at most a soft drift lower into 4pm MYT, not a forced drop.
- **Put/call 0.53 = calm, call-heavy positioning.** Downside hedges are light: few large puts above $75k. If $79,250 breaks, there is little dealer hedging cushion until the $75k area, so a slide could be quick.

- **Volatility after expiry.** About a third of open interest rolls off at 4pm MYT. Dealers lose hedging inventory just as the US election (3 Nov) and jobs report (6 Nov) arrive; the 6 Nov weekly IV (38.1%) is higher than the monthly (35.2%), so the market expects bigger moves next week.
- **Implied move.** DVOL around 36 means a typical daily move of ~1.9% (about +/-$1,550), so a $79.6k-$82.8k band covers a normal day.
- **Size matters:** yes. This is one of the largest expiries of the quarter; watch for chop and wicks between 2pm and 4pm MYT as positions are closed or rolled.

Data note: the Deribit public API (book summary, DVOL, index) could not be read this run, so options figures come from published reports. Strike sizes are from CryptoTicker (17 Oct) and may have shifted since; notional, P/C and max pain from KuCoin/MarsBit and Cointribune (28-29 Oct). DVOL ~36 per Cointribune (29 Oct). Treat as largest seen, not exact.

2. Price action and key levels

- BTC dropped to about **$79,607** after the Fed decision (Wednesday close) and bounced to **$81,547** after the US open on Thursday (around 9:30-11:40pm MYT) on strong GDP data.
- Price is still stuck in the **$79,200 - $81,500** range that has held since 24 Oct. Daily highs keep stalling near $81,300-$81,500.
- October is on track to close down about **3.3%**. Rekt Capital says BTC needs to reclaim $81,400 by the weekly close to turn the short-term trend up.
- On-chain: about 14,942 BTC left exchanges in one day, the biggest net withdrawal in five weeks (Santiment), which tends to support price.

Type	Level	Why it matters
Resistance 2	$84,000 - $84,400	ETF average cost basis ($84,364) and ~1.08M BTC of overhead supply between $84k and $85.5k.
Resistance 1	$81,400 - $82,500	Today's high ($81,547), weekly reclaim level, and ~884k BTC of supply between $81k and $82.5k.
Pivot	$80,000	Round number; Santiment: holding above opens $82.5k-$84k, losing it opens $79k.
Support	$79,250 - $79,600	24 Oct low and today's post-Fed low. A break removes the range floor.
Support 2	$77,800 - $78,000	Max pain for the 30 Oct expiry and the True Market Mean ($77,786).
Deep risk	$75,000 - $76,500	200-day average / 2 Sep low (~$76.3k-$76.5k) and the $75k put cluster.

3. Derivatives, flows and sentiment

Metric	Latest	Read
Futures open interest	676,761 BTC (27 Oct)	Highest since 24 Sep and up 9% from the Oct low while price fell. Leverage is building, not flushed.
Funding (OI-weighted)	~9.8% annualised (28 Oct)	Positive, longs paying shorts; mild long bias. Not extreme.
Liquidations (24h)	~$72.6M; 74% longs	Small. Longs hit on the post-Fed dip below $80k.
Spot BTC ETF flows	+$110M (26 Oct), +$176M (27 Oct), +$137M (28 Oct)	Three-day streak ~+$424M; October now net positive (~+$111M).
Implied vol (DVOL)	~36 (from 38 two days ago)	Calm; vol is cheap ahead of election and jobs data.
Fear & Greed	51 Neutral	Down from 68 a week ago; no extreme either way.

4. News and macro

- **Fed held rates at 3.75%-4.00%** on 28 Oct (10-2 vote). Governors Cook and Hammack wanted a **hike**. Markets now price a December hike with high odds (~80%+ per Cointribune / Reuters economists).

- **US data tonight was strong:** Q3 GDP 3.4% (vs 3.2% expected); September PCE 3.6% y/y and +0.5% m/m; core PCE 3.1% y/y. Hot inflation backs the hike story, but BTC rose on the growth beat.
- **Bitcoin ETFs** logged three straight days of inflows (~$424M) while Ether ETFs keep bleeding (October outflows ~$1.35B).
- **US midterm elections on 3 Nov.** A $68M bitcoin options bet targets a post-election breakout to $90,000 (CoinDesk).
- **Regulation:** the CLARITY Act stalled after a 49-50 Senate procedural vote; passage may slip into 2027.

Event calendar (Malaysia time)

When (MYT)	Event
Fri 30 Oct, 4:00pm	Deribit monthly BTC options expiry (~$10.9B, max pain $78k)
Sun 1 Nov	Monthly candle close (Oct) and US clocks fall back; US data moves to 9:30pm MYT
Tue 3 Nov	US midterm elections; JOLTS 11:00pm MYT
Wed 4 Nov (morning)	Election results come in
Fri 6 Nov, 9:30pm	US October jobs report; same day 4:00pm weekly options expiry
Tue 10 Nov, 9:30pm	US October CPI
Fri 13 Nov, 9:30pm	US October PPI
Thu 19 Nov, 3:00am	FOMC minutes (27-28 Oct meeting)
Thu 10 Dec, 3:00am	Next FOMC decision (8-9 Dec meeting, with dot plot)

5. Summary and prediction

BTC is boxed between ~$79.3k and ~$81.5k ahead of tomorrow's ~$10.9B monthly options expiry. The options book is call-heavy (P/C 0.53) but its big calls ($90k-$100k) are far away and will expire worthless, while max pain at $78k gives only a mild downward pull. Support comes from three days of ETF inflows, big exchange withdrawals and strong US growth; pressure comes from a hawkish Fed (two dissents for a hike, December hike priced) and rising leverage. Expect range trading into 4pm MYT, then a likely pickup in volatility as one-third of open interest rolls off before the election and jobs report. **24h call: range-bound $79,500 - $82,500, slight upside tilt while $80,000 holds.**

Scenario	Chance	Range	Trigger
Base: range / pin	50%	$79,500 - $82,500	Price holds $80k but fails at $81.5k-$82.5k into and after the 4pm MYT expiry.
Bullish breakout	25%	$82,500 - $84,400	Hourly close above $81,550 then hold above $82,500; ETF inflows continue.
Bearish break	25%	$77,800 - $79,500	Loss of $79,250 (range floor); max pain pull plus long liquidations toward $78k.

- **Upside signal:** 4-hour close above $81,550, then acceptance over $82,500 (opens $84k ETF cost basis).
- **Downside signal:** 4-hour close below $79,250; next stop $77,800-$78,000 (max pain / True Market Mean).
- Next report: Fri 30 Oct, 7:50am MYT
