BTC 8-Hour Market Report

Saturday 17 Oct 2026, 07:50 Malaysia time (23:50 UTC Fri 16 Oct)

BTC ~ $81,600

TokenPost/CoinGecko late Fri: 24h -0.7%, 7d -0.9%

Quick view	Bias: Neutral, slight caution	Next 24h: $80,300 - $83,000	Key floor: $80,000 / $79,800	Big event: $11.7B monthly expiry Fri 30 Oct; FOMC 29 Oct 2:00am

1. Options - next 24 hours and upcoming expiries

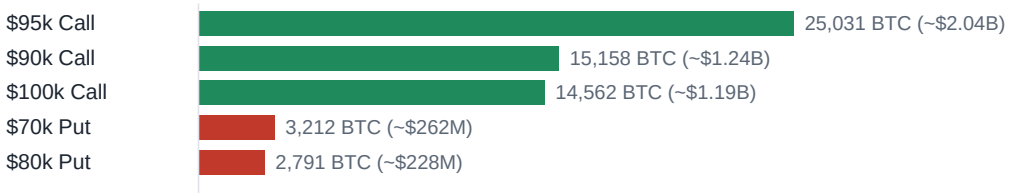
- **Next expiry:** Deribit daily, **today Sat 17 Oct, 4:00pm MYT** (08:00 UTC). A weekend daily is normally small; no strike data could be read this run.
- **Just done:** Friday's weekly (16 Oct) expired with ~18,000 BTC, **$1.47B** notional, put/call ~1.0, max pain **$83,000** (Greeks.Live via TokenPost). That pin is now gone.
- **Expiry that matters:** the **Fri 30 Oct monthly** (~$11.7B, ~35% of Deribit BTC OI), with a giant $95k call and max pain near $78k. Next weekly is Fri 23 Oct.

Expiry	Largest position seen	Size	Meaning
Sat 17 Oct (daily)	n/a - feed not readable	Small (typical weekend daily)	Too small to steer price; weekend liquidity matters more.
Fri 16 Oct (expired)	$78k put / $90k call	2,746 / 1,144 BTC (pre-expiry)	Put cluster $76k-80k showed where hedgers wanted cover; max pain $83k now released.
Fri 23 Oct (weekly)	n/a - no published data	Not found	Will build through the week; watch for $80k put / $85k-90k call concentration.

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Fri 16 Oct 4:00pm (expired)	$1.47B	~1.0 (1.37 pre)	$83,000	Puts $78k (2,746), $80k (2,142); calls $90k (1,144)
Sat 17 Oct 4:00pm (daily)	Small (n/a)	n/a	n/a	Not readable this run
Fri 23 Oct 4:00pm (weekly)	n/a	n/a	n/a	Not yet published
Fri 30 Oct 4:00pm (monthly)	~$11.7B	0.48	~$78,000 (Deribit)	Calls $95k (25,031), $90k (15,158), $100k (14,562); puts $70k (3,212), $80k (2,791)

Fri 30 Oct monthly - largest Deribit open interest (BTC; USD at ~$81.6k; data as of 10 Oct)



How options affect the market now

- **Pin released:** the $83k max-pain magnet from Friday's weekly is gone; price can drift more freely over the weekend, but with low volume.
- **$80k is the dealer floor:** Greeks.Live notes put gamma building at $80k. Dealers short those puts buy dips near $80k, then sell into weakness if it breaks, so a clean break below $79,800 could speed up.
- **Calls far away:** the big call walls ($90k, $95k, $100k) are 10%+ above spot. They don't cap price this week; they only matter if BTC rallies hard into late October.
- **Pull toward $78k into 30 Oct:** monthly max pain sits ~4% below spot. Not a force today, but it becomes a gravity point in the final days before the monthly expiry.

- **Cheap volatility:** implied vol ~35% (Greeks.Live calls it a floor). Implied daily move ~1.8% (about +/- $1,500). Low IV plus big macro risk (Iran, rate-hike odds) means a sharp move is underpriced.
- **Sentiment:** the expired weekly was put-heavy (P/C 1.37 pre-expiry) while the monthly is call-heavy (0.48): short-term hedging, longer-term upside bets.

Data note: the Deribit public API (index, DVOL, book summary) could not be reached this run, so options figures come from published reports (CryptoTicker, Bitcoin.com, TokenPost, CryptoBriefing). Monthly strike data is from 10 Oct and may have shifted; treat as 'largest seen'. IV is Greeks.Live's ~35%, not a live DVOL read.

2. Price action and key levels

- BTC dipped below $80,000 on Thu 15 Oct after hot US CPI/PPI (low ~$79,800) and recovered within hours.
- Friday it rallied to ~$82,700 (7:22am ET, Yahoo) in the US morning, then faded to ~$81,600 by Friday's US close (TokenPost, 21:12 UTC).
- 24h range per CoinGecko: $80,761 - $82,816. Price is stuck in a $79,800-$83,700 range for a week.
- Bigger picture: ~40% above the cycle low near $58k but down ~24% year on year; the 200-day average is far below at ~$72,200.

Type	Level	Why it matters
Resistance 2	$83,700 - $85,000	12 Oct high and strong rejection zone (Coinpedia); Strive's average cost ~$84,500.
Resistance 1	$82,500 - $83,000	Repeated 24h highs; Friday's max pain $83k; rejected again Friday.
Pivot	$81,500 - $82,000	Where price is sitting; mid of the week's range.
Support 1	$80,000 / $79,800	Round number, put gamma, twice-defended range low.
Support 2	$78,000 - $79,400	Monthly max pain $78k; Fib extension $79.4k.
Deep risk	$76,000 - $77,000	Bottom of the weekly demand zone; prior put cluster $76k.

3. Derivatives, flows and sentiment

Metric	Latest	Read
Implied vol (IV)	~35% (Greeks.Live, 16 Oct)	Very low; implied daily move ~1.8%. Options are cheap for a breakout.
Futures open interest	$51.7B / ~624k BTC (Coinglass, 10 Oct)	Leverage still sizable; no fresh read this run.
Funding rates	Not found this run	No live figure; long liquidations suggest longs were crowded mid-week.
Liquidations (24h to 15 Oct)	$948M crypto, 90.6% longs; BTC ~$200M	Long flush on the CPI/PPI shock; largest $12M BTC long at $80,209.
Spot BTC ETF flows	Wed 14 Oct -$261.5M; Thu 15 Oct +$5.1M	Oct to date about -$540M (Farside). Mon-Thu net -$146M (other tally). Demand weak.
Fear and Greed	64 Greed (Coinglass, 16 Oct)	Up 12 points in a day: sentiment recovered faster than flows.
Oct 28 Fed hike odds	~26% (CME, after peak ~47%)	Hot inflation put a hike on the table; key macro risk.

4. News and macro

- **Hot US inflation:** September PPI +6.3% y/y (forecast 5.3%), core 5.0%; CPI +0.6% m/m vs 0.5% expected. Markets now price a real chance of a Fed **hike** on 28 Oct.
- **Iran risk:** CBS reported the Pentagon has plans ready to strike an Iranian military site with a MOAB bomb pending Trump's approval; White House says 'all options' are open. Brent crude above $106.

- **Asia stock shock:** KOSPI fell as much as 9% on 15 Oct (closed -7.6%) with a circuit-breaker halt; Nikkei fell over 5% intraday. Risk appetite fragile.
- **Options:** $1.47B weekly BTC options expired Friday at $83k max pain; IV at ~35% floor, buyers 'unwilling to pay a premium' (Greeks.Live).
- **Flows:** spot BTC ETFs near zero inflow after outflows; on-chain data shows whales buying dips while retail sells. Mining difficulty jumped ~6%.

Event calendar (Malaysia time)

When (MYT)	Event
Sat 17 Oct 4:00pm	Deribit daily BTC options expiry (small)
Sat 17 - Sun 18 Oct	Weekend: thin liquidity; Iran headlines are the main risk
Fri 23 Oct 4:00pm	Deribit weekly BTC options expiry
Thu 29 Oct 2:00am	FOMC rate decision (28 Oct, 2:00pm ET); press conference 2:30am
Thu 29 Oct 8:30pm	US Q3 GDP (advance) and September PCE inflation
Fri 30 Oct 4:00pm	Deribit MONTHLY expiry: ~$11.7B, max pain ~$78k, $95k call wall
Wed 4 Nov (US Tue 3 Nov)	US midterm elections

5. Summary and prediction

BTC is consolidating around $81,600 after surviving a hot-inflation shock that briefly sent it under $80,000. Friday's weekly expiry removed the $83k pin, implied volatility is unusually low (~35%), and the weekend usually brings thin trading. Options put a dealer floor near $80,000, while the big call walls ($90k-$100k) are too far away to cap price now. Flows remain weak (ETF outflows in October) even as sentiment has bounced to Greed (64), and the macro backdrop is tense: rate-hike odds for 28 Oct and Iran strike headlines. The most likely path is a range between the $80k floor and the $83k ceiling, with downside tail risk larger than upside if headlines hit. **24h call: range-bound $80,300-$83,000, slight downside skew; a break below $79,800 is the signal to respect.**

Scenario	Chance	Range	Trigger
Base: range	60%	$80,300 - $83,000	Quiet weekend, no new Iran escalation; dips toward $80k bought.
Bullish	20%	$83,000 - $85,000	Hourly close above $83,000 with rising spot volume; calm geopolitics.
Bearish	20%	$78,000 - $80,300	Loss of $79,800 (put-gamma break), Iran strike news or oil spike; long liquidations.

- **Downside signal:** 1-hour close below $79,800 opens $78k (monthly max pain) quickly.
- **Upside signal:** 1-hour close above $83,000 with volume targets $84,500-$85,000.
- Next report: 3:50pm MYT Sat 17 Oct
