BTC 8-Hour Market Report

Tuesday 27 Oct 2026, 23:50 Malaysia time (15:50 UTC)

BTC ~ $79,950

CoinGlass ~00:00 MYT; -0.7% 24h, -2.6% 7d

Quick view	**Bias:** Neutral-to-bearish, range-bound into Fed	**Next 24h range:** $78,800 - $81,000	**Key floor:** $79,000-79,200, then $78,000 (max pain)	**Big event:** Fed decision Thu 29 Oct 02:00 MYT; $11-12B monthly expiry Fri 16:00 MYT

1. Options - next 24 hours and upcoming expiries

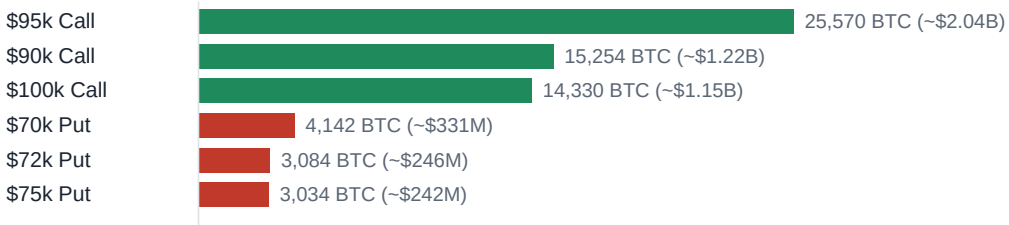
- **Next expiry:** Deribit daily BTC options expire **Wed 28 Oct, 4:00pm MYT** (08:00 UTC). Thursday 29 Oct daily follows at the same time.
- **How big:** daily expiries are small next to this week's monthly; no reliable strike data for the 28 Oct daily could be read this run, so treat it as a minor event.
- **The expiry that matters:** Friday **30 Oct, 4:00pm MYT** is both the weekly and the October monthly - about **$11-12B notional** (~35% of all Deribit BTC option OI), max pain **$78,000-79,000**.

Expiry	Largest position seen	Size	Meaning
28 Oct daily	n/a (feed not readable)	Small	Unlikely to steer price; spot and pre-Fed flows dominate
30 Oct (weekly + monthly) call	$95,000 Call	25,570 BTC (~$2.04B)	Far out of the money (+19%); likely to expire worthless, no near-term wall
30 Oct call	$90,000 / $100,000 Calls	15,254 / 14,330 BTC	Upside hope from early Oct, now far away
30 Oct put	$70,000 Put	4,142 BTC (~$331M)	Largest put; with $72k/$75k puts forms the deep downside hedge zone

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Wed 28 Oct, 16:00 (daily)	Small	n/a	n/a	No data this run
Fri 30 Oct, 16:00 (weekly + monthly)	$11.1-12.2B	0.52-0.56	$78,000-79,000	Calls $95k, $90k, $100k; puts $70k, $72k, $75k
Fri 27 Nov, 16:00 (monthly)	~26,800 BTC (~$2.1B)	n/a	n/a	n/a

30 Oct monthly - largest open interest by strike (BTC, CryptoTicker 17 Oct)



How options affect the market now

- **Max pain pull:** with spot ~$79,950 and max pain $78-79k, the 'least payout' point sits just 1-2% below. Into Friday that is a mild downward magnet, not a force.
- **Call-heavy, but stale:** P/C ~0.52-0.56 looks bullish, yet the big calls ($90k-$100k) are 13-25% out of the money. They give dealers little to hedge near spot, so there is no call wall close by to squeeze through.
- **Downside hedging is live:** 25-delta skew rose to 10.4% (Glassnode) and the most-traded BTC option on Tuesday was the 25 Dec $72k put. Traders are paying up for protection - sentiment is defensive.
- **Volatility:** implied vol (DVOL) was last seen ~37-38 (20-21 Oct), i.e. an implied daily move of ~1.9% (~$1,550). Realised vol is lower, so options price more movement than the market delivers - typical before a known event (Fed).

- **After expiry:** once ~$11-12B rolls off Friday, pinning pressure fades and price is freer to trend; combined with the Fed (Thu 02:00 MYT) and PCE/GDP (Thu 20:30 MYT), Friday-weekend volatility is likely to rise.
- **Next 24h expiry:** too small to matter; watch spot levels and pre-Fed positioning instead.

Data note: the Deribit public API (index, DVOL, book summary) could not be reached this run, so strike sizes are the largest seen in published reports (CryptoTicker 17 and 22 Oct) and may have changed. USD sizes use ~$79,950. Notional ranges reflect different sources/dates.

2. Price action and key levels

- BTC slipped below $80,000 on Tuesday as the Fed's two-day meeting began; CoinDesk had ~$79,700 at 11:30 UTC, CoinGlass ~$79,950 around 00:00 MYT (-0.7% 24h).
- Tuesday range (to 10:47 GMT): $79,421 - $80,680; Monday close $80,151. Saturday's flush low was ~$79,146-79,263.
- Price lost the 50-day line on Saturday for the first time in 66 days; the 50-day EMA (~$80,800) is now overhead resistance.
- Crypto ignored a 3.1% Kospi rally and US equity strength; oil (WTI ~$102, Brent ~$116) and 10Y yields near 4.98% keep pressure on risk.

Type	Level	Why it matters
Resistance 2	$82,000-82,500	20-day EMA ~$81,900; analysts' 'stabilisation' trigger
Resistance 1	$80,700-81,000	Tuesday high, 50-day EMA ~$80,800; repeated rejections
Pivot	$80,000	Round number; acceptance above/below sets the day's tone
Support 1	$79,000-79,400	Tuesday/Saturday lows and monthly max pain zone
Support 2	$77,700-78,000	100-day EMA ~$77,700; $78k max pain; liquidity pocket
Deep risk	$75,500-76,500	Galaxy's weekly-close invalidation ($76,540), Hilbert's $75.5k; $75k put strike

3. Derivatives, flows and sentiment

Metric	Latest	Read
Futures OI (all exch.)	~$54B (CoinGlass); +1-2.3% Tue	OI rising while price falls = new shorts and dip longs; fuel for a move either way
Funding	Positive (CoinDesk)	Longs still paying; crowded-long risk on a break lower
Long/short ratio	2.43 (Ted Pillows)	Heavily long-skewed retail positioning
Liquidations 24h	~$56M (CoinGlass); $133M Mon	Quiet versus Saturday's $810M flush
Spot BTC ETFs	+$110.3M Mon 26 Oct (all IBIT)	Snapped -$773.5M two-day outflow; Oct net ~-$203M
Options	25d skew 10.4%; OI $38.6B	Put demand rising - defensive
Fear & Greed	48 (Neutral)	Down from 50; not yet fearful

4. News and macro

- **Fed:** FOMC meets 27-28 Oct; ~90% priced for a hold at 3.75-4.00% after September's hike. Markets price ~73-80% odds of another hike in December - Chair Warsh's tone is the key risk.
- **Macro data:** September PCE (expected 3.6% y/y headline, 3.1% core), Q3 GDP (3.0-3.2%) and jobless claims on Thu 29 Oct; oil near $100+ keeps inflation fears alive.
- **Flows:** spot BTC ETFs +$110M Monday after -$774M in two sessions; Strategy bought no BTC last week (holds 848,517 BTC, avg ~$75,446) and reports Q3 Thursday.
- **Galaxy:** Alex Thorn says now is a good time to accumulate; bear call is only undone by a weekly close below $76,540.

- **Security:** Electrum wallet bug let rogue servers fake payments and steal funds - fixed in 4.8.3; update older versions.
- **Politics:** US midterm elections 3 Nov; a $68M bet on Deribit targets $90k after the vote.

Event calendar (Malaysia time)

When (MYT)	Event
Wed 28 Oct, 16:00	Deribit daily BTC options expiry
Thu 29 Oct, 02:00 / 02:30	FOMC rate decision / Warsh press conference
Thu 29 Oct, 20:30	US September PCE, Q3 GDP (advance), jobless claims
Thu 29 Oct (US eve.)	ECB decision; Coinbase and Strategy Q3 results after US close
Fri 30 Oct, 16:00	Deribit weekly + October monthly expiry (~$11-12B BTC)
Fri 30 Oct	Bank of Japan decision
Wed 4 Nov (US 3 Nov)	US midterm elections; results through Wed MYT
Fri 6 Nov, 21:30	US October jobs report (after US clocks change 1 Nov)
Thu 10 Dec, 03:00	Next FOMC decision (8-9 Dec meeting)

5. Summary and prediction

BTC is stuck just under $80,000 with the Fed decision about 26 hours away. Options positioning is call-heavy on paper but the big calls are far out of the money, while fresh put buying and positive skew show traders hedging the downside. Max pain at $78-79k sits slightly below spot, open interest is rising with positive funding and a 2.4 long/short ratio, so a break of $79,000 could trigger long liquidations toward $78,000. Upside needs a reclaim of the $80,800 50-day EMA. Expect pre-Fed chop with a slight downward lean. **24h call: range $78,800-81,000, slight bearish tilt; hold below $80.8k.**

Scenario	Chance	Range	Trigger
Base: pre-Fed chop	55%	$78,800 - $81,000	Low volume wait for Fed; max pain pulls toward $79k
Bullish	20%	$81,000 - $82,500	Hourly close above $80,800 + another ETF inflow day; short squeeze
Bearish	25%	$77,500 - $78,800	Loss of $79,000 on volume; crowded longs liquidated; oil/yields spike

- Clean bullish signal: 4h close above $80,800 (50-day EMA) and hold - opens $82,000.
- Clean bearish signal: 4h close below $79,000 - opens $78,000 then the $77,700 100-day EMA.
- Next report: 7:50am MYT Wed 28 Oct
