BTC 8-Hour Market Report

BTC ~ $81,200

Saturday 24 Oct 2026, 07:50 Malaysia time (23:50 UTC Fri 23 Oct)

CoinDesk $81,225 (Fri 3:39pm ET); 24h -0.2%, 7d ~+1.9%

Quick view	**Bias:** Neutral, slight downside tilt	**Next 24h:** $80,000 - $82,600	**Key floor:** $80,800 - $81,000 (then $80,200)	**Big event:** $12B monthly expiry Fri 30 Oct 4pm; FOMC Thu 29 Oct 2am

1. Options - next 24 hours and upcoming expiries

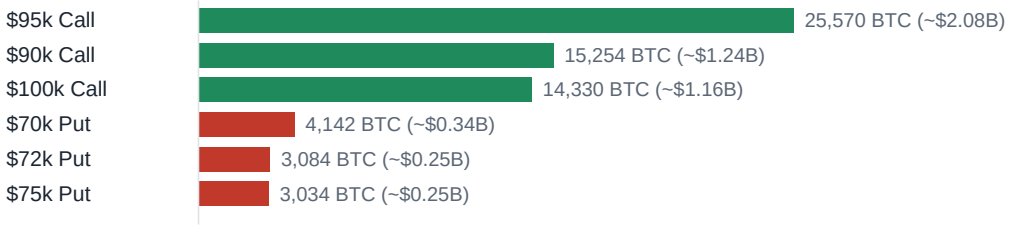
- Next expiry: **Saturday 24 Oct, 4:00pm MYT** (Deribit daily). Daily expiries are small (typically a few hundred $M at most) - too small to steer price on a thin weekend.
- Yesterday's weekly (Fri 23 Oct) settled ~16,000 BTC (~$1.28B) with max pain at **$82,000**; that pin is now gone, freeing price a little.
- The expiry that matters is **Fri 30 Oct 4:00pm MYT** - weekly and October monthly together, ~$12.2B notional (~35% of Deribit BTC OI), max pain $78,000-79,000.

Expiry	Largest position seen	Size	Meaning
24 Oct (daily)	Not readable this run	Small (daily)	Little hedging impact; weekend liquidity matters more
30 Oct - Call	$95,000 call	25,570 BTC (~$2.08B)	Far above spot; mostly a lottery ticket unless BTC rallies hard
30 Oct - Call	$90,000 call	15,254 BTC (~$1.24B)	Nearest big call wall; could add upside fuel only above $86k
30 Oct - Put	$70,000 put	4,142 BTC (~$0.34B)	Downside protection far below; put side is light

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Fri 23 Oct 4pm (expired)	~$1.28B	n/a	$82,000	n/a
Sat 24 Oct 4pm (daily)	Small	n/a	n/a	Not readable this run
Fri 30 Oct 4pm (weekly + monthly)	~$12.2B	0.50-0.52	$78,000-79,000	Calls $95k / $90k / $100k; puts $70k / $72k / $75k
Fri 27 Nov 4pm (monthly)	n/a	n/a	n/a	Not yet reported
Fri 25 Dec 4pm (quarterly)	~$10B (30 Sep)	n/a	~$75,000 (30 Sep)	Not reported

Deribit BTC options - 30 Oct 2026 expiry, largest open interest by strike (as of 17 Oct)



How options affect the market now

- **No pin today.** The $82k max-pain magnet from Friday's weekly is gone and Saturday's daily is small, so price is driven by spot flows and weekend leverage, not dealer hedging.
- **Max pain sits below spot.** For 30 Oct it is ~$78-79k, about $2-3k under the price. Pull toward max pain tends to show up in the last 2-3 days before expiry, so it is a mild downward gravity for next week, not today.
- **Call-heavy book (P/C ~0.5).** Positioning is bullish but far out of the money ($90-100k). Those calls only matter if BTC reclaims ~$86k, where dealer hedging could start to accelerate a squeeze.

- **Thin put protection.** Little put OI between $75k and $80k means few dealer buyers on the way down - a break of $80k could travel quickly toward $78k.
- **Volatility is cheap-ish but rich vs realised.** DVOL ~38 (implied daily move ~2.0%, ~+/-$1,650) vs 14-day realised ~20%; event risk (FOMC + expiry next week) keeps IV supported.
- **After 30 Oct**, roughly a third of OI rolls off; expect vol to reset and price to move more freely into November.

Data note: the Deribit public API could not be read this run, so options figures are 'largest seen' from published reports (CryptoTicker 17 and 20 Oct, Crypto Briefing, TokenPost 23 Oct). Strike sizes are from 17 Oct and may have shifted; USD sizes use ~$81,200.

2. Price action and key levels

- BTC slipped from a midweek high near **$84,800** (Wed) to an overnight low of **$80,790-80,990** on Thursday as the Nasdaq fell 2.6% (Meta, chips) and ~$430-440M of crypto longs were liquidated.
- Friday was steadier: BTC held $81,000-82,100, trading ~$81,200-81,700; CoinDesk showed $81,225 at 3:39pm ET (-0.2% 24h).
- Price sits right on the 50-day average (~$81,300-81,800) and below the 20-day EMA (~$82,600) - a flat-to-soft structure inside an $80k-$84k range.
- Oil spike (Brent ~$113, Iran headlines) and a sharp ETF outflow capped bounces; the weekend usually brings thin liquidity and wick risk.

Type	Level	Why it matters
Resistance 2	$84,000 - $84,800	Range ceiling and Wednesday rejection high; heavy call OI nearby
Resistance 1	$82,100 - $82,600	Friday's high and 20-day EMA; first test for any bounce
Pivot	$81,300 - $81,800	50-day average and Thursday close; above = range holds, below = sellers in control
Support 1	$80,800 - $81,000	Overnight low and 50-day EMA; hourly close below invalidates the base case
Support 2	$79,800 - $80,200	Range floor and average ETF buyer cost basis (~$80.2k, Glassnode)
Deep risk	$77,400 - $79,000	30-Oct max pain ($78-79k) and 100-day EMA; thin put support in between

3. Derivatives, flows and sentiment

Metric	Latest	Read
Futures open interest	$38.4B (12 venues, +1.7%) - 23 Oct	Leverage rebuilt quickly after the flush; more fuel for wicks
Funding (perps)	~0.007% / 8h (~7% ann.) - 23 Oct	Mildly positive; longs still paying, not overheated
Liquidations (24h to Fri)	~$431-440M, ~$397-412M longs	Long flush on Thursday's Nasdaq drop
Spot BTC ETF flows	Thu 22 Oct -$635.6M; week +$442.7M	Largest daily outflow since June (IBIT -254M, FBTC -217M); Friday's figure not yet seen
Options P/C (OI)	Calls/puts ~1.7:1; 30-Oct P/C ~0.5	Bullish tilt, but far OTM
DVOL (30d IV)	~38.3 (20 Oct)	Implied daily move ~2.0%; realised only ~20%
Fear & Greed	50-51 (Neutral)	Down from 68 a day earlier; no extreme either way

4. News and macro

- **ETF outflow:** US spot BTC ETFs saw -$635.6M on Thu 22 Oct, ending a three-day $1B+ inflow run; October MTD roughly flat-to-negative.

- **Risk-off in tech:** Nasdaq -2.6% Thursday (worst since June) on Meta capex and a chip sell-off; Strategy -5.6%, Coinbase -4%.
- **Oil and Iran:** Brent settled $113 (highest since May) on reports of renewed US/Israeli strike plans and Trump saying no talks with Iran - an inflation and risk-sentiment headwind.
- **Rates:** US 10-year fell to ~4.96% (biggest one-day drop since Mar 2023); hike odds for the Fed fell to ~7-8%. FOMC decision Thu 29 Oct 2:00am MYT, hold expected.
- **Other:** China court moving to confiscate 61,896 BTC tied to the Qian Zhimin fraud (coins still in UK custody); Robinhood got a Dubai licence; a16z renamed its crypto fund a16z Frontier. No major hacks reported.

Event calendar (Malaysia time)

When (MYT)	Event
Sat 24 Oct 4:00pm	Deribit daily options expiry (small)
Wed 28 Oct 9:00am	RBNZ decision
Wed 28 Oct 9:45pm	Bank of Canada decision
Thu 29 Oct 2:00am / 2:30am	**FOMC decision** / Chair Warsh press conference
Thu 29 Oct 8:30pm	US Q3 GDP (advance) + September PCE
Thu 29 Oct 9:15pm	ECB decision
Fri 30 Oct ~11:00am	BoJ decision (no fixed time)
Fri 30 Oct 4:00pm	**Deribit weekly + October monthly expiry (~$12.2B)**
Fri 30 Oct 8:30pm	US Employment Cost Index Q3
Fri 6 Nov 9:30pm	US jobs report (October)
Tue 10 Nov 9:30pm	US CPI (October)
Fri 13 Nov 9:30pm	US PPI

5. Summary and prediction

BTC is stuck in an $80k-$84k range, sitting on its 50-day average near $81.2k after Thursday's tech-led long flush and the largest ETF outflow since June. Options are not a driver today: Friday's $82k pin has expired and Saturday's daily is small. The big lever is next Friday's ~$12B expiry, whose max pain ($78-79k) sits below spot and whose calls are far out of the money - a mild downward gravity into next week, alongside FOMC on Thursday morning MYT. Over the weekend, thin liquidity plus rebuilt open interest means wicks of $1-2k are likely in both directions, but the $80.8k-$81k floor has held twice. **24h call: range-bound $80,000-$82,600 with a slight downside tilt; a clean hourly close below $80,800 opens $79,500.**

Scenario	Chance	Range	Trigger
Base - range	55%	$80,300 - $82,600	Quiet weekend, no new Iran/oil shock; buyers defend $80.8-81k
Bearish	27%	$78,800 - $80,800	Hourly close below $80,800; oil spike / Iran escalation; long liquidation cascade toward ETF cost basis and max pain
Bullish	18%	$82,600 - $84,200	Hourly close above $82,600 with rising spot volume; short squeeze toward $84k range top

- Break signal: hourly close above **$82,600** (bullish) or below **$80,800** (bearish); funding turning negative would mark a washout.
- Weekend oil/Iran headlines and Sunday-night (Mon morning MYT) futures open; next ETF flow print Mon/Tue.
- Next report: 3:50pm MYT Saturday 24 Oct.
