BTC 8-Hour Market Report

Monday 02 Nov 2026, 07:50 Malaysia time (23:50 UTC Sun)

BTC ~ $77,900

CoinGecko/Deribit, late 1 Nov: 24h +0.5%, 7d -3.3%

Quick view	**Bias:** Neutral, slightly bearish below $78.8k	**Next 24h:** $76,800 - $79,300	**Key floor:** $76,300 - $76,500 (week low / 200-day EMA)	**Big event:** ISM Mfg 11:00pm tonight; midterms Tue; jobs Fri 9:30pm

1. Options - next 24 hours and upcoming expiries

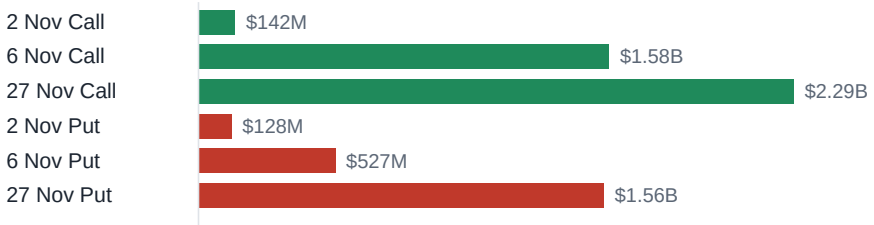
- **Next expiry: today, Mon 2 Nov, 4:00pm MYT** (08:00 UTC). It is small: about **$270M** on Deribit (calls $142M, puts $128M, P/C 0.90).
- Tue 3 Nov daily ($78M, P/C 2.52) falls just after the 24h window. Both are too small to pin price on their own.
- **The one that matters this week is Fri 6 Nov, 4:00pm MYT: about $2.1B**, very call-heavy (P/C 0.33), max pain about $80,000, and it lands hours before the US jobs report.

Expiry	Largest position seen	Size	Meaning
2 Nov (today 4pm)	Calls in total; $78,500 call was the most-traded 2 Nov contract	$142M call OI	Near-the-money calls just above spot; a mild magnet near $78-78.5k into 4pm
2 Nov (today 4pm)	Puts in total	$128M put OI	Balanced book; little dealer pressure either way
6 Nov weekly	Call clusters $82k / $85k / $90k	$1.58B call OI	Upside overhead; dealers would buy into a rally only above ~$80k
6 Nov weekly	Put cluster $74k - $78k	$527M put OI	Hedging demand near spot; downside cushion but can speed a drop below $76k

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Mon 2 Nov, 4:00pm (daily)	~$270M	0.90	n/a	$78,500 call most active
Tue 3 Nov, 4:00pm (daily)	~$78M	2.52	n/a	Put-heavy, small
Fri 6 Nov, 4:00pm (weekly)	~$2.1B	0.33	~$80,000	Calls $82k, $85k, $90k; puts $74k-78k
Fri 27 Nov, 4:00pm (monthly)	~$3.8B	0.68	~$80,000	Calls $88k, $90k, $98k; $58k put heavily traded
Fri 25 Dec, 4:00pm (quarterly)	~$10.7B	n/a	~$75,000	$80k call, $60k put, $100k call (largest OI)

Deribit call vs put open interest by expiry (USD notional, 1 Nov 15:49 UTC)



How options affect the market now

- **Today's 4pm expiry is too small to matter** ($270M against ~$23B Deribit OI). Expect spot to drift around $78k into settlement, with no real pin.
- **Pull toward $80k into Friday:** both the weekly and monthly have max pain near $80,000, about 2.7% above spot. That is a gentle upward drag if price is stable, but it only works in a quiet market.
- **Call walls overhead:** $82k, $85k and $90k calls on 6 Nov are far out of the money. If price breaks $80k, dealers short those calls may have to buy, which can speed the move. Below $80k they stay inactive.

- **Put demand is real:** after the Binance hack, about $590M of mostly $74k-78k puts were bought in blocks, and the 27 Nov $58k put was the most-traded contract on 1 Nov. Whales are paying for crash cover, so a break of $76k could be fast.
- **Volatility:** DVOL ~39.9 (implied daily move about 2.1%, or +/- $1,630). That is calm after the spike to 42. A jobs-report surprise right after Friday's expiry could revive vol.
- Put/call across all expiries is ~0.66-0.73: cautious, not panicked.

Data note: the live Deribit API was not reachable this run, so options figures come from a perpfinder Deribit snapshot (1 Nov 15:49 UTC), TokenPost, and BigGo/CryptoPotato reports. Per-strike OI for the 2 Nov expiry was not available, so the chart shows call/put totals by expiry. Max pain figures are as published on 30 Oct and may have moved.

2. Price action and key levels

- BTC is holding $77.4k-78.1k, its tightest range in two weeks, after the 29-30 Oct Binance hack sell-off hit a low near $76,300-76,500, just above the 200-day EMA.
- October closed around $77.2k-77.6k, down ~7.5% for the month. Price is below the 50-day average (~$81.9k) and 38% under the $126k all-time high.
- Rebounds stall near $78.1k. Analysts flag $78.8k and $79.8k as the levels to reclaim, with $80k-81.5k the ETF and treasury cost-basis zone (Glassnode).
- Turnover rose ($44B vs a $27.8B median) while range narrowed. That compression usually ends in a sharp move.

Type	Level	Why it matters
Resistance	$79,800 - $80,000	Analyst target; max pain for the weekly and monthly expiries; round number
Resistance	$80,000 - $81,500	ETF and treasury cost-basis zone (Glassnode); 50-day MA ~$81.9k above
Pivot	$78,000 - $78,800	24h high $78.1k; immediate resistance $78.8k; near-term balance point
Support	$77,300 - $77,400	24h low; bottom of the tight range
Support	$76,300 - $76,500	October and hack-day low; 200-day EMA
Deep risk	$74,000 - $75,000	Bitfinex key support; Nov put cluster; Strategy cost basis ~$75.4k

3. Derivatives, flows and sentiment

Metric	Latest	Read
Futures OI	~686,000 BTC (5-week high)	Leverage rebuilt after the flush; fuel for a squeeze either way
Perp funding	+0.0033% / 8h (~3.7% ann.)	Neutral; longs are not crowded
Futures basis	Dec ~5.6% annualised	Modest premium; little speculative heat
Liquidations	$1.55B on 30 Oct (84% longs)	Longs already flushed; no fresh large wipeout reported since
Options	Total OI ~$28.3B; P/C 0.66-0.73	Cautious hedging, not panic; DVOL ~39.9
Spot ETF flows	-$643M on 30 Oct; Oct net ~-$516M	Biggest outflow since June; ended 4-day inflow run. Next data due Mon (US)
Sentiment	Fear & Greed 34 (Fear)	Up from 30. Coinbase premium hit a 4-year low on 30 Oct
Binance	Net outflow ~$3.64B after reopening	About 2.1% of reserves; updated proof-of-reserves due 2 Nov

4. News and macro

- **Binance hack aftermath:** about $6.3B stolen on 29 Oct (FBI blames North Korea's TraderTraitor). Binance says ~90% is replenished and customers will be covered. Withdrawals resumed in phases on 1 Nov, with a ~$3.6B net outflow so far.

Updated proof-of-reserves is expected today.

- **Strategy (Saylor):** a Sunday "room for even more orange" post hints at a purchase disclosure on Monday (US time). The firm holds 848,517 BTC at ~$75.4k average cost.
- **Fed:** held at 3.75-4.00% on 28 Oct, with two votes for a hike. Markets price an ~80-85% chance of a **December hike**. That hawkish backdrop is a headwind for risk assets.
- **US data this week:** ISM Mfg (Mon), JOLTS (Tue), ADP/ISM Services (Wed), October jobs report Fri 6 Nov 9:30pm MYT (consensus ~65-75k, unemployment 4.2%).
- **US midterm elections Tue 3 Nov:** results arrive Wednesday morning MYT. Crypto-market-structure bills (CLARITY Act) are a talking point, and one $68M options bet targets a post-election run to $90k.
- US clocks moved to winter time on 1 Nov, so US 8:30am releases are now **9:30pm MYT**.

Event calendar (Malaysia time)

When (MYT)	Event
Mon 2 Nov, 4:00pm	Deribit daily expiry (~$270M)
Mon 2 Nov, 11:00pm	US ISM Manufacturing PMI; Strategy buy disclosure likely during US hours
Tue 3 Nov, all day	US midterm elections; JOLTS 11:00pm
Wed 4 Nov, morning	Midterm results; ADP 9:15pm; ISM Services 11:00pm
Thu 5 Nov, 8:00pm / 9:30pm	Bank of England decision / US jobless claims
Fri 6 Nov, 4:00pm	Weekly expiry ~$2.1B (P/C 0.33, max pain ~$80k)
Fri 6 Nov, 9:30pm	US October jobs report; UMich sentiment 11:00pm
Tue 10 Nov, 9:30pm	US October CPI
Fri 27 Nov, 4:00pm	Monthly expiry ~$3.8B (max pain ~$80k)
Thu 10 Dec, 3:00am	FOMC decision (8-9 Dec meeting); hike largely priced

5. Summary and prediction

BTC is coiling at $77.4k-78.1k after the Binance-hack flush. Longs were liquidated, funding is neutral and sentiment is in fear, which limits further forced selling. Still, ETF outflows, a hawkish Fed and heavy put buying keep rallies capped below $78.8k-80k. Today's 4pm expiry is too small to move price. The real options event is Friday's call-heavy $2.1B weekly, with max pain near $80k, followed hours later by the jobs report. Possible catalysts in the next 24 hours are Binance's proof-of-reserves, a Strategy purchase and ISM tonight. **24h call: range-bound $76.8k-79.3k with a slight downside lean; a close above $78.8k opens $80k, and below $77.3k targets $76.3k.**

Scenario	Chance	Range	Trigger
Base: range	55%	$76,800 - $79,300	Calm proof-of-reserves; ISM in line; price chops around $78k into 4pm expiry
Bullish	20%	$78,800 - $80,500	Strategy buy plus clean Binance reserves; hourly close above $78.8k, then $79.8k
Bearish	25%	$75,000 - $77,300	Weak reserves news or hot ISM prices; loss of $77.3k, then $76.3k (put hedging speeds it)

- **Breakout signal:** a 4h close above $78,800 with rising OI and positive ETF flows, which targets $80k (max pain) next.
- **Breakdown signal:** a 4h close below $76,300 (200-day EMA), which brings the $74k-75k put zone and Strategy cost basis into play.
- Next report: 3:50pm MYT Mon 2 Nov (just before the 4pm expiry).
