# BTC 8-Hour Market Report

Sat 31 Oct 2026, 23:50 Malaysia time (15:50 UTC)

**BTC ~ $77,160**

CoinGlass live; -1.5% 24h, -3% week, >-7% Oct

| | | | | |
|---|---|---|---|---|
| **Quick view** | **Bias:** Neutral to bearish; post-hack fear, puts in demand | **Next 24h range:** $76,000 - $78,600 (base) | **Key floor:** $76,300-76,500 (multi-week low / 200-day EMA) | **Big event:** Binance withdrawals restart Sun 1 Nov; US midterms Tue 3 Nov |

## 1. Options - next 24 hours and upcoming expiries

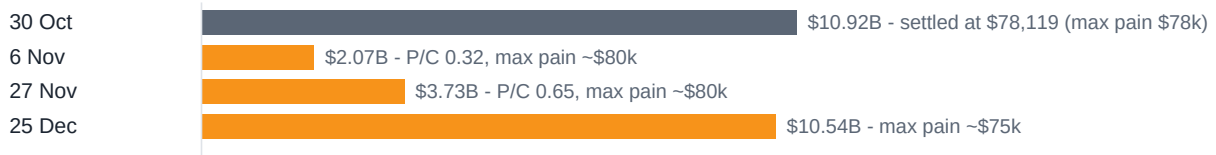
- **Next expiry:** Deribit daily, Sun 1 Nov 4:00pm MYT (08:00 UTC). Small dailies like this usually hold well under $1B; no published size was found for it. Today's 31 Oct daily (~$622M, P/C 1.22, max pain $79k) already settled at 4:00pm.
- **How big:** Too small to steer price on its own. The big October monthly (~$10.9B) settled Fri 30 Oct at $78,119, right on its $78k max pain, so that pin is now gone.
- **Expiry that matters this week:** Weekly Fri 6 Nov 4:00pm MYT, ~$2.07B notional, P/C 0.32, max pain ~$80k. Calls cluster at $82k-$90k; puts sit at $74k-$78k.

| Expiry | Largest position seen | Size | Meaning |
|---|---|---|---|
| Sun 1 Nov daily | n/a (no per-strike data found) | Small (well under $1B est.) | Minor pin; spot flows and Binance news matter more |
| Fri 6 Nov weekly - calls | $82k / $85k / $90k calls | Part of ~$2.07B; calls ~3.1x puts | Overhead call supply; $82k-85k are the top-volume calls today |
| Fri 6 Nov weekly - puts | $74k-$78k puts (heaviest $74k/$76k) | Part of ~$2.07B | Hedged downside; a break of $76k can make dealers sell more |
| Fri 13 Nov - put | $74k put | Top put by volume (2,000 BTC blocks) | Large funds hedging a drop toward $74k |

### Upcoming expiries

| Expiry (Malaysia time) | Notional | Put/Call | Max pain | Largest strikes |
|---|---|---|---|---|
| Sun 1 Nov, 4:00pm (daily) | n/a | n/a | n/a | No published data |
| Fri 6 Nov, 4:00pm (weekly) | ~$2.07B | 0.32 | ~$80,000 | Calls $82k, $85k, $90k (also $95k); puts $74k-$78k |
| Fri 27 Nov, 4:00pm (monthly) | ~$3.73B | 0.65 | ~$80,000 | Calls $88k, $90k, $98k |
| Fri 25 Dec, 4:00pm (quarterly) | ~$10.5B | n/a | ~$75,000 | Top OI on Deribit: $80k call, $60k put, $100k call |

**BTC option notional by expiry, Deribit (USD billions; orange = upcoming, grey = settled)**



### How options affect the market now

- **Pin released:** With the $10.9B monthly settled, dealer hedging that held price near $78k has fallen away. Price can move more freely, and implied vol is already up (DVOL ~38.7 vs 37 before the hack).
- **Put demand = fear:** After the hack, Deribit traders bought 1.63 BTC of puts per call, and 25-delta skew rose across all tenors. Big blocks went into Nov $74k and $64k puts. This is protection, not panic selling.
- **Downside acceleration zone:** Puts cluster at $74k-$78k. If spot falls through $76k, dealers short those puts sell futures to hedge, which can speed the drop toward $74k-$75k.
- **Upside cap:** Calls at $82k-$90k for 6 Nov are mostly far out of the money. A rally to $80k (the 6 Nov and 27 Nov max pain) is possible, but $82k+ meets call supply.

- **Max pain pull:** Both the weekly and monthly sit near $80k, about 3.7% above spot. The pull is weak this far from expiry. It strengthens late on Thu 5 Nov into the Fri 6 Nov expiry.
- **Next 24h expiry:** The Sun 1 Nov daily is not big enough to matter. Watch Binance's withdrawal restart instead.

Data note: the Deribit public API (index, DVOL, book summary) could not be reached this run (permission timeout), so option figures come from published reports by TokenPost, BigGo/Tokenist and CoinDesk dated 30-31 Oct. Per-strike sizes for the 1 Nov and 6 Nov expiries were not available; treat them as the largest strikes reported.

## 2. Price action and key levels

- BTC trades around $77,160 (CoinGlass live, -1.5% 24h). Saturday's range is roughly $76,300-$77,800. It stayed below the $78k area after Friday's monthly expiry settled at $78,119.
- The Binance hack sell-off (Thu 29 Oct, ~4:38am MYT Fri) took BTC from $80,850 to a $76,320-76,500 low. That low held about $30 above the 200-day EMA ($76,468), and is the lowest price since late August/September.
- Two rebound attempts on Friday failed below $78k-$79k. Lower highs and a flat bounce point to buyers who are cautious, not aggressive.
- BTC is about 39% below its Oct 2025 record (~$126k), down more than 7% in October and about 11% year to date.

| Type | Level | Why it matters |
|---|---|---|
| Resistance 2 | $80,000-80,600 | Round number, 50-day EMA ($80,593), and max pain for both 6 Nov and 27 Nov |
| Resistance 1 | $78,000-78,500 | Failed rebounds, the Oct 30 settlement ($78,119), and the analysts' 'bearish flip' line |
| Pivot | $77,000 | Middle of the weekend range; price has rotated around it |
| Support | $76,300-76,500 | Multi-week low and the 200-day EMA ($76,468); the hack low held here |
| Deep risk | $74,000-75,000 | Heavy Nov $74k put cluster, the $75k round number, and little support between $76k and $75k |
| Tail | ~$73,000 | Next support cited below $75k |

## 3. Derivatives, flows and sentiment

| Metric | Latest | Read |
|---|---|---|
| Futures OI (all venues) | ~$53.2B (CoinGlass live) | Fell about 1.4% on hack day as longs were flushed. Leverage is still sizeable. |
| Funding (BTC perps) | Positive, rising (30 Oct) | Longs are still paying while price falls. That leaves room for another long squeeze. |
| Liquidations 24h | Hack day ~$1.55-1.66B total; BTC ~$500-556M, ~83% longs | The main flush is done. Saturday is calmer (~$427M market-wide reported). |
| Options OI (Deribit) | $28.36B (+3.6% d/d) | New hedges are being added. Calls are 58% of OI and puts 42%. |
| Implied vol (DVOL) | ~38.7 (30 Oct) | Implies about a 2.0% (~$1,560) daily move. Up from 37 before the hack. |
| Spot BTC ETFs | -$643M on 30 Oct (IBIT -$234M, FBTC -$201M) | This broke a 4-day, $441M inflow streak. Watch Monday's print. |
| Fear & Greed | ~30 (Fear) on 30 Oct; other gauges show 14 | Sentiment is in fear or extreme fear. That is often contrarian-positive over days, not hours. |
| Coinbase Premium | 4-year low (30 Oct) | US spot demand is weak. |

## 4. News and macro

- **Binance hack (~$6.3B, largest on record):** Attributed by Chainalysis to North Korea's Tradertraitor group. About 18,270 BTC sit in 19 wallets and had not moved as of the latest reports. Binance says about 90% of affected assets are now replenished and withdrawals resume **Sun 1 Nov**. A full zero-knowledge reserve proof is due 3 Nov (UTC).

- **Fed:** The 28 Oct FOMC held at 3.75%-4.00% (10-2 vote; Cook and Hammack dissented in favour of a hike). Chair Warsh gave no forward guidance. Next decision: 9 Dec (early 10 Dec MYT).
- **Big US week:** ISM manufacturing (Mon), US midterm elections (Tue 3 Nov), ADP and ISM services (Wed), BoE decision (Thu), and the October jobs report (Fri 6 Nov; about +60k expected). Apple reports Mon 2 Nov.
- **ETF flows turned negative:** -$643M on 30 Oct after the hack. Monday's flows will show whether institutions are buying the dip.
- **Positioning for midterms:** A reported $68M BTC options bet targets a post-election breakout to $90k. Meanwhile, block flow is dominated by Nov/Dec puts.

**Event calendar (Malaysia time)**

| When (MYT) | Event |
|---|---|
| Sun 1 Nov (time TBC) | Binance phased withdrawal restart; US clocks move back (US data 1h later in MYT from Mon) |
| Sun 1 Nov, 4:00pm | Deribit daily BTC options expiry |
| Mon 2 Nov, 11:00pm | US ISM Manufacturing PMI (Oct) |
| Tue 3 Nov, 11:00pm | US JOLTS job openings; Binance ZK reserve proof due (3 Nov UTC) |
| Tue 3 Nov - Wed 4 Nov | US midterm elections; results flow in Wed 4 Nov MYT daytime |
| Wed 4 Nov, 9:15pm / 11:00pm | US ADP employment / ISM Services PMI |
| Thu 5 Nov, 8:00pm | Bank of England rate decision |
| Fri 6 Nov, 4:00pm | Deribit weekly expiry (~$2.07B, max pain ~$80k) |
| Fri 6 Nov, 9:30pm | US October jobs report (NFP) |
| Fri 13 Nov, 4:00pm | Deribit weekly expiry (large $74k put interest) |
| Mid-Nov (date TBC) | US October CPI |
| Fri 27 Nov, 4:00pm | Deribit monthly expiry (~$3.73B, P/C 0.65) |
| Thu 10 Dec, 3:00am | FOMC decision (9 Dec US) |

## 5. Summary and prediction

BTC is stabilising just above the $76.3k-76.5k post-hack low, but it has not reclaimed $78k. The October options pin is gone, put skew and put buying are elevated, funding is still positive, and ETFs just posted a $643M outflow. Together that leaves the market vulnerable to one more leg down if Binance's Sunday withdrawal restart goes badly or the hacker's 18k BTC starts moving. On the other side, sentiment sits in fear, the main long flush is done, and Binance reports 90% of assets restored. A smooth restart could trigger a relief bounce toward $78.5k-$80k, where max pain for the 6 Nov and 27 Nov expiries sits. Over the weekend, liquidity is thin and the range bias dominates. **24h call: range $76,000-$78,600, slight downside tilt; a clean loss of $76.3k opens $74k-75k.**

| Scenario | Chance | Range | Trigger |
|---|---|---|---|
| Base: range | 55% | $76,000 - $78,600 | Binance withdrawals restart without major problems; weekend volume stays thin; $76.3k holds |
| Bullish: relief bounce | 20% | $78,500 - $80,500 | An hourly close above $78.5k after a smooth Binance restart, a short squeeze, and calls bid into the midterms |
| Bearish: support break | 25% | $74,000 - $76,300 | Withdrawal delays, the hacker's BTC moving to exchanges, or a 4h close below $76.3k with puts hedged into $74k |

- **Breakdown signal:** A 4h close below $76,300 on rising volume and OI. That targets $75k and then $74k (the put cluster).
- **Breakout signal:** An hourly close above $78,500 with funding steady. That targets $80k-80.6k (max pain plus the 50-day EMA). Also watch Binance net outflows once withdrawals reopen.
- Next report: Sun 1 Nov, 7:50am MYT
