1. Options - next 24 hours and upcoming expiries

- **Next expiry:** Deribit daily **Mon 26 Oct, 4:00pm MYT** (08:00 UTC). Daily contracts are small; no reliable strike data was readable this run.
- **Size:** the Monday daily is minor next to Friday. The live Deribit feed could not be read this run, so dailies are treated as low impact.
- **Which expiry matters this week: Fri 30 Oct 4:00pm MYT** is both the weekly and the October monthly - about **$11.1-12.3B** notional, roughly 35% of all Deribit BTC options OI. Max pain $78,000-79,000.

30 Oct (weekly+monthly)	$75,000 Put	3,034 BTC (~$244M)	Put cluster under max pain - support zone if sell-off deepens

How options affect the market now

- **Calls are far out of the money.** The big $90k-$100k call stack sits 12-24% above spot, so dealers carry little delta there; it will not cap or lift price this week unless a sharp rally starts.

- **Max pain $78k-79k is below spot.** Option sellers gain most if BTC drifts lower into Friday; in a weak, headline-driven market this adds a mild downward pull, but max pain is not a forecast.
- **Put/call ~0.5 looks bullish on paper**, but most of those calls were bought when BTC was $83k-86k; they are now stale upside bets, not fresh demand.
- **Downside hedges are thin above $75k.** Few big puts between $76k and $80k means little dealer buying support there; a break of $79k could accelerate toward $78k-77.6k.
- **Volatility:** DVOL was ~38 (20 Oct) vs ~20% realized - options price about a 2% daily move (~$1,600). FOMC (Thu) and Friday expiry sit back to back, so expect IV to stay firm until Friday, then ease.
- **Next 24h:** Monday's daily expiry is too small to matter; Iran headlines and the Asia/US Monday open are the drivers.

Data note: the live Deribit API (index, DVOL, option book) was not reachable this run. Strike and expiry figures are the largest seen in published Deribit summaries (CryptoTicker 17 and 20 Oct, Bitcoin News Digest 25 Oct, Crypto Briefing 8 Oct); USD sizes = OI x $80,400. Treat as indicative.

2. Price action and key levels

- BTC is at ~$80,400, down from ~$81,960 a week ago (-1.8%). Week range $79,107 - $84,856; the high came Wed on a short squeeze, the low on Saturday.
- Saturday's daily close of $80,770 was the lowest since 17 Sep; BTC briefly fell below $80,000 for the first time since 15 Oct on US Middle East embassy evacuations.
- Price is below the 50-day average (~$81,700-81,800), lost on Friday after 66 days above it. Daily RSI ~44 and falling; daily ATR ~$2,130.
- The $80,000-81,500 zone is the average cost basis of ETF and treasury-company buyers (Glassnode) - holding it matters for sentiment.

Type	Level	Why it matters
Resistance 2	$82,300-82,600	Daily EMA20 and Bollinger midline; prior breakdown zone
Resistance 1	$81,700-81,900	50-day average and Saturday's 24h high; reclaim = bulls back in control
Pivot	$80,400-80,850	Daily pivot / EMA50; current balance area
Support 1	$80,000 / $79,100	Round number and ETF cost basis; weekend low $79,107-79,263
Support 2	$78,000-77,600	Options max pain and Glassnode True Market Mean
Deep risk	$75,600 / $75,000	Daily EMA200 and $75k put cluster

3. Derivatives, flows and sentiment

Spot BTC ETF flows	Week 19-23 Oct: +$301M net	+$1.07B Mon-Wed, then -$635.6M (22 Oct) and further outflows (23 Oct); Oct to date ~-$314M
Implied vol (DVOL)	~38 (20 Oct)	Rich vs ~20% realized; event premium for Fed + expiry

4. News and macro

- **Geopolitics:** Trump said the US could strike Iran on Sunday or reach a deal; US cut staff at Middle East embassies. Brent closed Friday ~$116.7, highest since late April - inflation worry.

5. Summary and prediction

BTC is clinging to the $80,000 area after a weekend long flush, with ETF buyers' cost basis right underneath and the 50-day average now overhead at ~$81,800. Options do not give strong support: the giant call stack is far above, max pain ($78k-79k) sits below spot, and puts are thin until $75k. With Iran headlines live over the weekend and the Fed plus a $11-12B expiry later in the week, the next 24 hours most likely stay in a $79k-$82k range with downside tail risk larger than upside. **24h call: range $79,000-81,900, slight downside tilt; a close below $79,100 opens $78,000.**

Scenario	Chance	Range	Trigger
Base: range	50%	$79,200 - $81,800	No US-Iran escalation; Asia/US Monday open quiet ahead of Fed
Bullish	20%	$81,800 - $83,200	US-Iran deal headline, oil falls; reclaim 50-day $81,800 on volume
Bearish	30%	$77,600 - $79,200	Strike on Iran / oil spike; hourly close below $79,100

- **Breakout up:** 4h close above $81,900 (50-day) with oil easing - targets $82,600 then $84,000.
- **Breakdown:** hourly close below $79,100 - next stops $78,000 (max pain) and $77,600.
