BTC 8-Hour Market Report

Thursday 15 Oct 2026, 07:50 Malaysia time (23:50 UTC, 14 Oct)

BTC ~ $81,700

CoinGecko/CoinDesk: -1.9% 24h, -1.9% 7d

Quick view	**Bias:** Neutral-to-bearish after hot core CPI	**Next 24h range:** $79,800 - $83,600	**Key floor:** $80,000-80,400 (big put strike + Oct 9 low)	**Big event:** Weekly expiry Fri 16 Oct 4:00pm; US PPI/claims 8:30pm

1. Options - next 24 hours and upcoming expiries

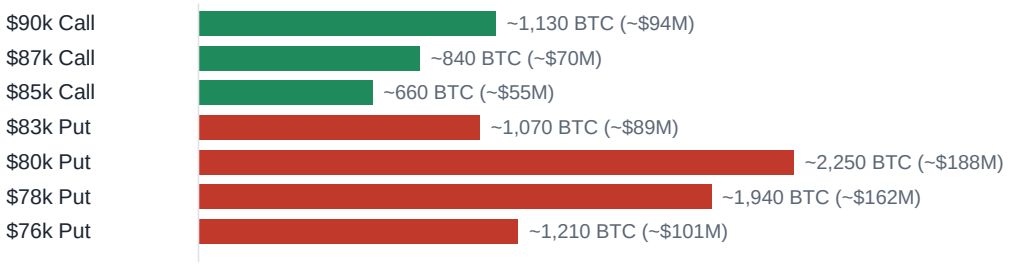
- Next expiry: **daily, Thu 15 Oct 4:00pm MYT** (08:00 UTC). Daily contracts are small; its size could not be read this run and it is unlikely to move price on its own.
- The expiry that matters this week is the **Fri 16 Oct weekly (4:00pm MYT)**: about 15,500 BTC (~$1.29B), put-heavy (P/C 1.43), max pain **$83,000** - roughly $1,300 above spot.
- The real heavyweight is the **Fri 30 Oct monthly**: ~140,800 BTC (~$11.5B at today's price), call-heavy (P/C 0.48) with max pain at **$78,000**.

Expiry	Largest position seen	Size	Meaning
15 Oct daily	Not readable this run	n/a	Small daily; treat as noise vs the weekly
16 Oct weekly	$80,000 Put	~2,260 BTC (~$188M)	Biggest wall; dealers likely buy dips near $80k, but a clean break can speed selling
16 Oct weekly	$90,000 Call	~1,130 BTC (~$94M)	Far out of the money; little pull unless BTC rips above $85k
16 Oct weekly	$78,000 Put	~1,940 BTC (~$162M)	Second downside layer; target zone if $80k fails

Upcoming expiries

Expiry (Malaysia time)	Notional	Put/Call	Max pain	Largest strikes
Thu 15 Oct, 4:00pm (daily)	n/a (not readable)	n/a	n/a	n/a
Fri 16 Oct, 4:00pm (weekly)	~$1.29B (15,502 BTC)	1.43	$83,000	Put $80k ~$188M; Put $78k ~$162M; Call $90k ~$94M
Fri 23 Oct, 4:00pm (weekly)	n/a	n/a	n/a	Not yet reported
Fri 30 Oct, 4:00pm (monthly)	~$11.5B (140,844 BTC)	0.48	$78,000	Call $95k 25,031 BTC (~$2.05B); Put $70k 3,212 BTC (~$262M)
Fri 25 Dec, 4:00pm (quarterly)	n/a	n/a	n/a	Not reported this run

Fri 16 Oct weekly expiry - largest open interest by strike (Deribit, Oct 12 snapshot, approx. BTC)



How options affect the market now

- **$80,000 is the key options floor.** It is the biggest single strike for Friday. While BTC stays above it, hedging around that strike tends to absorb selling; if it breaks with volume, put hedging can add to the drop toward $78,000.
- **Max pain pull is mildly upward short term:** the weekly max pain ($83,000) sits above spot, so into Friday 4:00pm there is a soft pull back toward $82,500-83,000 if nothing new hits.

- **The monthly points the other way:** Oct 30 max pain is $78,000, well below spot. After this Friday, gravity from the big monthly shifts lower unless spot gets well above $85k.
- **Put/call split:** the weekly is put-heavy (1.43) - traders paid for downside cover ahead of CPI, and that fear proved right. The monthly is call-heavy (0.48), mostly far $90k-100k upside bets that are losing value daily.
- **Volatility:** 30-day implied vol (BVIV) rose to ~40% around CPI from low levels; that prices about a 2.1% (~$1,700) daily move. Expect vol to ease after Friday's expiry unless PPI or Fed talk surprises.
- **Is the next-24h expiry big enough to matter?** No - the Thursday daily is small. Friday's $1.3B weekly is modest; the Oct 30 monthly is the one with real market-moving size.

Data note: the Deribit public API (index, DVOL, book summary) could not be reached this run, so options figures come from published snapshots (CryptoSlate/Deribit Oct 12, CryptoTicker/Deribit Oct 10). BTC sizes for the weekly are converted from reported USD notional at ~$83,450 and are approximate - treat as "largest seen". Implied vol uses the BVIV 30-day index as a DVOL proxy.

2. Price action and key levels

- BTC traded ~$83,400-83,500 before the US CPI release (8:30pm MYT Wed), briefly spiked to $84,000 earlier in the day, then sold off on the hot core reading.
- Post-CPI low was ~$81,376 (CoinGecko 24h range $81,376-84,025); Bitstamp printed $81,926 on the first leg. Price now ~$81,600-81,850.
- The $84,000-84,500 zone (heavy holder cost basis, ~867k BTC cited) rejected price again; this is now the ceiling to beat.
- The 7-day low is $80,427 (Oct 9). That and the $80k put wall make $80,000-80,400 the line the market is defending.

Type	Level	Why it matters
Resistance 2	$85,000-87,000	Prior cost-basis cluster and Oct 16 call strikes ($85k/$87k); $86.5k was a sell wall
Resistance 1	$84,000-84,500	Repeated rejection, CPI-day high $84,025, large holder cost basis
Pivot	$83,000	Oct 16 weekly max pain and pre-CPI range; reclaiming it turns the tape neutral again
Support 1	$81,000-81,400	Post-CPI low ~$81,376 and largest spot bid block cited near $81k
Support 2	$80,000-80,400	Biggest weekly put strike (~$188M) and 7-day low $80,427
Deep risk	$78,000 / $75,000	$78k puts + Oct 30 max pain; $75,025 is the Sept 15 swing low; long-liquidation cluster below ~$74k

3. Derivatives, flows and sentiment

Metric	Latest	Read
BTC perp open interest	~$67.7B (Oct 14); BTC OI -3.5% d/d	Some deleveraging, but leverage is still high relative to spot volume
Funding (8h)	~+0.003% (Oct 14)	Near neutral; no crowded long to unwind, no squeeze fuel either
Liquidations 24h	$811M (to Tue, mostly longs), then ~$136-140M	Big flush done earlier in the week; CPI-day tally not yet published
Spot BTC ETF flows	+$175.7M (Oct 13), +$2.2M (Oct 14, preliminary)	Flows stabilised after -$729M on Oct 7-8; October still net negative (~-$276M)
Fear & Greed	41 (Fear)	Down from 56-69 Greed earlier in the month
Implied vol	BVIV 30d ~40%; 7d ATM ~32% (Oct 12)	~2.1% (~$1,700) implied daily move
US 10-year yield	~5.33%	Near 24-year highs - a headwind for BTC

4. News and macro

- **Hot US CPI (Sept):** headline 3.7% y/y vs 3.6% expected (0.6% m/m); core 0.3% m/m and 2.6% y/y, both above forecast. Gasoline +9.1% m/m drove much of the jump.
- **Fed hike risk is back:** the next FOMC is Oct 27-28 (decision ~2:00am MYT Thu 29 Oct). Sources disagree on the odds of an October hike (CME FedWatch cited anywhere from ~20% to ~54%), but most see a hike by December as likely.
- **Energy and geopolitics:** Brent ~$106 on Middle East tension; yields spiked after CPI and gold fell to ~$4,079.
- **Security:** Ledger reported an unauthorized implant found in a device sold via a third-party reseller - a supply-chain warning for hardware wallet buyers.
- **Regulation:** Dutch central bank licensed a MiCA euro stablecoin (Qivalis); a French proposal would tax regulated stablecoins at 31.4%.

Event calendar (Malaysia time)

When (MYT)	Event
Thu 15 Oct, 4:00pm	Deribit daily options expiry
Thu 15 Oct, 8:30pm	US initial jobless claims; Sept PPI and retail sales (sources list Thu or Fri - check)
Fri 16 Oct, 4:00pm	Deribit weekly expiry (~$1.29B, max pain $83k)
Fri 16 Oct, 8:30pm	Possible PPI release date if not Thursday
Fri 23 Oct, 4:00pm	Deribit weekly expiry
Thu 29 Oct, ~2:00am	FOMC rate decision (Oct 27-28 meeting) + press conference ~2:30am
Fri 30 Oct, 4:00pm	Deribit monthly expiry (~$11.5B, max pain $78k)
Fri 6 Nov, ~9:30pm	US October jobs report (expected; US clocks change 1 Nov)

5. Summary and prediction

The hot core CPI print broke the pre-data calm: BTC was rejected again at $84,000-84,500 and dropped to the $81.4k-81.9k area as yields jumped and Fed hike odds rose. Positioning is cleaner after this week's $811M long flush and funding is flat, so there is no big leverage overhang - but ETF demand is only just stabilising and Fear & Greed sits at 41. Options give a firm-looking floor at $80,000 (largest weekly put) and a mild pull toward the $83,000 weekly max pain into Friday's 4:00pm expiry, while the much larger Oct 30 monthly has max pain far lower at $78,000. PPI/claims tonight at 8:30pm MYT is the next volatility trigger. **24h call: choppy, slightly heavy - most likely $80,500-83,500, with $80k the line that decides whether $78k opens up.**

Scenario	Chance	Range	Trigger
Base: range/chop	50%	$80,500 - $83,500	No big PPI surprise; drift toward $83k max pain into Friday expiry
Bullish	20%	$83,500 - $85,500	Soft PPI/claims, ETF inflows resume, hourly close above $83,500 then $84,500
Bearish	30%	$78,000 - $80,500	Hot PPI or hawkish Fed talk; hourly close below $80,400 triggers put hedging and stops

- **Upside signal:** 4-hour close above $84,500 on rising spot volume - opens $86-87k.
- **Downside signal:** hourly close below $80,400 (7-day low and $80k put wall) - opens $78k and the Oct 30 max pain.
- Next report: 3:50pm MYT (Thu 15 Oct)
